TARGETS Our sustainability targets

This interactive document is optimized for use with Adobe Acrobat.

Introduction

Jochen Hanebeck
Chief Executive Officer

Sustainability: Our conviction, our responsibility

We are living in times in which the world is having to face a number of urgent challenges. In many cases, technology will be key to finding a solution. Especially with regard to decarbonization and digitalization, the semiconductor industry is attracting much more attention from politicians and society, and rightly so. Many societal aspirations, including the fundamental transformation of the energy sector, clean and safe mobility, and an intelligent and secure Internet of Things, will only be met with the help of semiconductors. I am convinced that semiconductors are essential to achieving balanced global development that secures people's livelihoods over the long term, promotes social cohesion and offers the prospect of a good life to the greatest number of people possible around the world.

As a leading semiconductor manufacturer, Infineon is aware of its responsibility. Our actions are helping to shape the environmental and digital transition. We aim to be not only a technology leader but also a pioneer in sustainability. For many years, we have been taking steps in our company to achieve this. Almost two decades have passed since Infineon joined the United Nations Global Compact, the world's largest initiative for sustainable and responsible corporate governance.

As a company, we are making a significant contribution to the green transformation through our actions and with our products and solutions. Our products help our customers use resources more efficiently and reduce any harmful impact on the environment. After deducting the CO₂ emissions arising from their manufacture, our products generate more than 113 million tons of CO₂ savings in the course of their use. This figure is around 34 times the emissions arising from the production process.

We want to improve this figure even further by substantially reducing our own carbon footprint. Infineon aims to become carbon-neutral by the end of the 2030 fiscal year. This target includes not only all direct emissions (scope 1) but also indirect emissions associated with the purchase of electricity and heat (scope 2). By the end of the 2025 fiscal year, we want to have reduced emissions by 70 percent compared with 2019. To reach these targets, we are focusing in particular on avoiding direct emissions, and here we are making good progress. By the end of the 2023 fiscal year, our scope 1 and scope 2 emissions were 56.8 percent below the emissions in the base year 2019.

The installation of new PFC abatement systems in our frontend manufacturing in Kulim (Malaysia) enabled us to reduce our scope 1 emissions by 21 percent. In the past fiscal year, we also launched a similar project at our site in Austin (Texas, USA). This means that we will have voluntarily equipped all our relevant manufacturing facilities with highly-efficient PFC abatement systems. In conjunction with our other current energy-saving activities, this will bring us a good step closer to our carbon neutrality target.

We are also applying cutting-edge technology to the construction of our new manufacturing facilities in Dresden (Germany) and Kulim, with these projects being certified in accordance with Green Building Certification Schemes. Both fabs will meet the highest standards for energy and resource efficiency. In addition, the chips manufactured in the new facilities will enable the delivery of particularly smart and energy-efficient solutions. We are therefore continuing to increase the net benefit to the environment of our products.

In the 2023 fiscal year, we launched a wide-scope European research project at our manufacturing facility in Villach (Austria) into resource-saving production using artificial intelligence (AI). Together with a consortium of more than 50 producers, suppliers, research institutes and AI specialists from twelve different countries, we want to be a trailblazer for industry in Europe that is resilient, environmentally sustainable and competitive in the long term.

In addition to our extensive activities geared towards carbon neutrality, another vital focus for us is our ongoing commitment to corporate citizenship. Our company has a presence in many countries around the world. In many regions, we are part of the local economy and of local society. We contribute towards improving people's lives by taking an active part in social projects and supporting local initiatives and organizations.

Respect for human rights is a matter of course for Infineon. Compliance with human rights obligations is laid down in our Business Conduct Guidelines. In the 2023 fiscal year, we also introduced our own human rights management system. This is designed to help better identify and minimize risks relating to human rights in Infineon's business operations and in our supply chains. In addition, we have codified our values in a Human Rights Policy. This describes Infineon's key requirements with regard to compliance with human rights in its own business operations and in its dealings with its business partners.

With our comprehensive understanding of Diversity & Inclusion, we support a corporate culture that values the individuality of each employee and promotes equal opportunities. With our Diversity Days, we offer a platform to celebrate diversity and raise awareness of Diversity & Inclusion.

This summary and the following report demonstrate the measures Infineon has adopted to consistently pursue its sustainability strategy. The company's continuous commitment to sustainability is evaluated positively by independent institutions, as evidenced by the following external ratings and awards:

- › In the 2023 fiscal year, Infineon was included in the Dow Jones Sustainability Index family for the thirteenth year in a row. This means that our company ranks among the leading companies in the world for sustainability. We were listed in

both the Dow Jones Sustainability™ Europe Index and the Dow Jones Sustainability™ World Index. Infineon was also named in S&P Global's Sustainability Yearbook for the thirteenth year in a row.

- › For the fifth year in a row, our company received an AA rating (based on a scale from AAA to CCC) in the MSCI Environmental, Social and Governance (ESG) Ratings.
- › For six years in succession, EcoVadis awarded Infineon Gold status. It has now awarded our company the EcoVadis Platinum medal for the second year in a row. This means that Infineon belongs to the top 1 percent of all the companies assessed. EcoVadis is an independent rating agency that rates suppliers on the basis of their environmental, social and financial performance.
- › For many years, Infineon has been using the non-profit organization CDP to publish information about the opportunities and risks for the company associated with climate change and water security. Infineon was awarded CDP Leadership Level A- (on a scale from A to D) for climate change and Management Level B for water security.
- › Infineon topped the Financial Times Diversity Leaders Ranking in 2022. This is based on independent surveys of more than 100,000 employees in 850 companies in Europe.

Commitment to sustainability is a marathon, not a sprint. Infineon set off from the start with ambitious goals. We have already passed many milestones. Yet, you can be sure we are not easing up on our sustainability activities but continuing to take big steps forward – out of conviction and our sense of responsibility and with the perseverance that is required.

Neubiberg, November 2023

Sincerely

Jochen Hanebeck

Jochen Hanebeck
Chief Executive Officer

Key figures

As a global semiconductor leader in power systems and IoT, we enable game-changing solutions for **green and efficient energy, clean and safe mobility,** as well as **smart and secure IoT.**

Notable events in the 2023 fiscal year

October 2022

Infineon opens new factory for power semiconductor modules in Cegléd (Hungary)

Infineon has opened a new factory in Cegléd. The factory is dedicated to the assembly and testing of power semiconductor modules for the electrification of vehicles, a key factor in improving the global CO₂ balance. Infineon has also invested in additional production capacity for power modules that enable green energy – for use in wind turbines and solar modules and in energy-efficient drives.

Infineon and VinFast extend partnership in the field of electromobility

Infineon is expanding its collaboration with VinFast, Vietnam's first global manufacturer of electric vehicles. The two companies announce they are setting up a joint application competence center for electromobility in Hanoi (Vietnam). The inauguration of the center is planned for the first quarter of the 2023 calendar year.

November 2022

Infineon tops the Financial Times Diversity Leaders Ranking in 2022

In the current ranking of Diversity Leaders, Infineon is in the top position. The ranking, published by the "Financial Times" and Statista, is based on an independent survey of more than 100,000 employees from 16 countries across Europe. Participants were asked to give their opinion on a series of statements surrounding age, gender, ethnicity, disability and sexual orientation.

December 2022

Infineon is one of the most sustainable companies in the world

Infineon is again listed in the Dow Jones Sustainability™ Europe Index and in the Dow Jones Sustainability™ World Index. This means that, for the thirteenth time in a row, Infineon has been included in the Dow Jones Sustainability Index family and therefore ranks among the leading companies for sustainability in the world.

Infineon is awarded CDP¹ Leadership Level A- for climate change and Management Level B for water security

Since 2014, Infineon has been using CDP to publish information about the opportunities and risks for the company associated with climate change and water security.

February 2023

Infineon gives the green light for new fab in Dresden (Germany)

Infineon starts construction on its new plant for analog/mixed-signal technologies and power semiconductors in Dresden. The German Federal Ministry for Economic Affairs and Climate Action (BMWK) has approved an early project launch, meaning that construction can begin before completion of the state-aid investigation by the European Commission. Subject to the European Commission's decision on state aid and the national grant procedure, the project is to be funded in accordance with the objectives of the European Chips Act. Infineon is seeking public funding of around €1 billion. The company plans to invest a total of around €5 billion in the plant, which is set to begin production in the 2026 calendar year. This constitutes the largest single investment in the company's history and is expected to create around 1,000 highly qualified jobs.

Infineon once again recognized as one of the best companies for sustainability

For the thirteenth consecutive year, Infineon is named in the Sustainability Yearbook published by S&P² Global and is therefore one of the 15 percent most sustainable semiconductor manufacturers worldwide.

German President Steinmeier visits Infineon site in Kulim (Malaysia)

While on a trip to Asia, German Federal President Frank-Walter Steinmeier visits Infineon in Kulim. The visit focuses on Infineon's contribution to enabling the global energy transition with energy-saving semiconductor solutions as well as by investing in solutions to further reduce its own carbon footprint.

Changes to the Supervisory Board

Dr. Wolfgang Eder and Hans-Ulrich Holdenried resigned from the Supervisory Board with effect from the end of the Annual General Meeting. Dr. Herbert Diess and Klaus Helmrich were newly elected to the Supervisory Board. At its meeting immediately following the Annual General Meeting, the Supervisory Board unanimously elected Dr. Herbert Diess, who had already been a member of Infineon's Supervisory Board from 2015 to 2020, as its new Chairman.

¹ CDP: Previously referred to as the Carbon Disclosure Project.

² S&P: Standard and Poor's.

March 2023

Infineon to acquire GaN Systems

Infineon and GaN Systems have signed a definitive agreement under which Infineon will acquire GaN Systems for US\$830 million. GaN Systems is a global technology leader in the development of GaN¹-based solutions for power conversion. The company is headquartered in Ottawa (Canada) and has more than 200 employees. The acquisition will strengthen Infineon's GaN portfolio and continue to reinforce its world-leading position in power systems in all three materials: silicon, silicon carbide and gallium nitride. GaN technology is paving the way for more energy-efficient and CO₂-saving solutions that support decarbonization.

Infineon and Delta Electronics to collaborate on electromobility

Infineon and Delta Electronics are expanding their long-term cooperation from industrial to automotive applications. The two companies sign a Memorandum of Understanding that will intensify their joint innovation activities to provide more efficient and higher-density solutions for the fast-growing electric vehicle (EV) market. The agreement covers a wide range of components such as high-voltage and low-voltage discrete semiconductors and power modules, as well as microcontrollers for EV drivetrain applications such as inverters, DC-DC converters and on-board chargers.

Infineon receives Platinum sustainability rating from EcoVadis

EcoVadis, an independent rating agency that monitors the sustainability of suppliers, analyzes Infineon with regard to environmental, social, ethical and financial influencing factors. The result is that Infineon has been awarded Gold status for six years in a row, and in the 2023 fiscal year, Infineon is awarded Platinum status for the second time in succession. This means that Infineon belongs to the top 1 percent of all the companies assessed.

Infineon is again awarded Prime status in the ISS² ESG³ Corporate Rating

Prime status is awarded to companies with an ESG performance that exceeds a sector-specific threshold, for which they need to meet ambitious absolute performance requirements.

April 2023

Infineon's industrial segment will now operate as Green Industrial Power

Infineon has renamed its Industrial Power Control (IPC) segment, which will now be known as Green Industrial Power (GIP). This underlines its firm focus on the trends of decarbonization and digitalization. The main growth driver of business in the renamed segment is green energy.

Infineon enables innovative solution for second life of electric car batteries

STABL Energy uses MOSFETs from Infineon to make stationary energy storage systems from retired electric car batteries. The first pilot systems have already been put into operation. The special advantage of the STABL solution is that it can connect discarded batteries with different residual capacities to the public power grid, even in larger quantities, without a central inverter.

Munich Local Court (Germany) appoints Ute Wolf as a member of the Supervisory Board

The Munich Local Court (Commercial Register) appoints Ute Wolf as new member of the Supervisory Board for a limited term until the Company's next Annual General Meeting in February 2024.

May 2023

MSCI⁴ ESG Research rates Infineon AA

The MSCI World ESG Index focuses on Environmental, Social and Governance aspects. The index works on the best-in-class principle. For the fifth consecutive year, Infineon is awarded an AA rating.

Infineon to lead European research project on Industry 5.0

Infineon takes over the management and coordination of the wide-scope European research project AIMS5.0 ("Artificial Intelligence in Manufacturing leading to Sustainability and Industry 5.0"). The project entails the use of hardware and software-based artificial intelligence to improve resource consumption in manufacturing, while at the same time improving product quality. It also aims to improve resilience and optimize supply chains and time-to-market in order to boost the international competitive strength of Europe.

1 GaN: Gallium nitride.

2 ISS: Institutional Shareholder Services Inc.

3 ESG: Environmental, Social and Governance.

4 MSCI: Morgan Stanley Capital International.

June 2023

STIHL honors Infineon as “Supplier of the Year 2022” in the semiconductor sector
Infineon not only supports STIHL’s battery strategy as a main supplier in the semiconductor sector but also works closely with STIHL in the area of research and development. This collaboration is designed to generate innovations in the field of energy-efficient motor control for battery-powered tools which could use compound semiconductors based on gallium nitride (GaN). STIHL presents the “Supplier of the Year 2022” award to five companies that have scored particularly well among all STIHL suppliers worldwide for their outstanding characteristics in terms of quality, technology, innovation, service and price/performance ratio.

Infineon again included in the FTSE4Good¹ Index Series

FTSE Russell, the trading name of FTSE International Limited and Frank Russell Company, evaluates the performance of companies based on internationally recognized standards relating to environmental, social and economic criteria. Infineon has been listed here since 2001.

July 2023

Infineon and SolarEdge sign a multi-year Capacity Reservation Agreement

Infineon and SolarEdge announce the signing of a multi-year Capacity Reservation Agreement (CRA). Extending their existing partnership, Infineon will supply SolarEdge with crucial components for a variety of SolarEdge products. In addition to the CRA, the companies will collaborate on the development of future technologies and innovative solar products based on wide-bandgap materials that are key for global green energy supplies.

Partnership reinforced: Infineon and Semikron Danfoss sign supply agreement for electromobility chips

Analysts are forecasting that vehicles with fully or partially electrified drivetrains will account for two-thirds of vehicles manufactured by 2028. This rapid growth in electromobility is driving the demand for power semiconductors. Against this backdrop, Infineon and Semikron Danfoss have signed a multi-year volume agreement for the supply of silicon-based electromobility chips.

August 2023

Infineon builds world’s largest 200-millimeter SiC² Power Fab in Kulim (Malaysia)

The decarbonization trend will result in strong market growth for power semiconductors. As a leader in power systems, Infineon is taking a further decisive step to shape this market. Infineon will significantly expand its manufacturing facilities in Kulim by building the world’s largest 200-millimeter SiC Power Fab. The planned expansion is backed by customer commitments covering about €5 billion of new design-wins in automotive and industrial applications as well as by about €1 billion in pre-payments. The market for silicon carbide is seeing accelerating growth, not only in the automotive industry but also in a wide range of industrial applications such as solar, energy storage and high-power EV charging.

TSMC, Bosch, Infineon and NXP bring advanced semiconductor manufacturing to Europe

TSMC, Bosch, Infineon and NXP announce a plan to invest in a joint venture, European Semiconductor Manufacturing Company (ESMC) GmbH, in Dresden (Germany). The aim is to construct a modern 300-millimeter fab to meet the future capacity needs of the fast-growing automotive and industrial sectors, with the final investment decision pending confirmation of the level of public funding for this project.

September 2023

Infineon is nominated for the German Sustainability Award

The German Sustainability Award honors the best in various industry sectors as well as role models for change across five transformation fields (climate, resources, nature, society and supply chain). Infineon is a finalist in the electrical engineering and electronics sector.

Infineon heads European research project to promote sustainability and the circular economy in the electronics industry

Infineon has taken over as head and coordinator of the broad-scope European research project EECONE (European ECOSystem for green Electronics), intended to make electronics in Europe more sustainable. The objective is to investigate technologies along the entire value chain, from design, manufacture and use, all the way to recycling.

¹ FTSE: Financial Times Stock Exchange.

² SiC: Silicon carbide.

Sustainability strategy

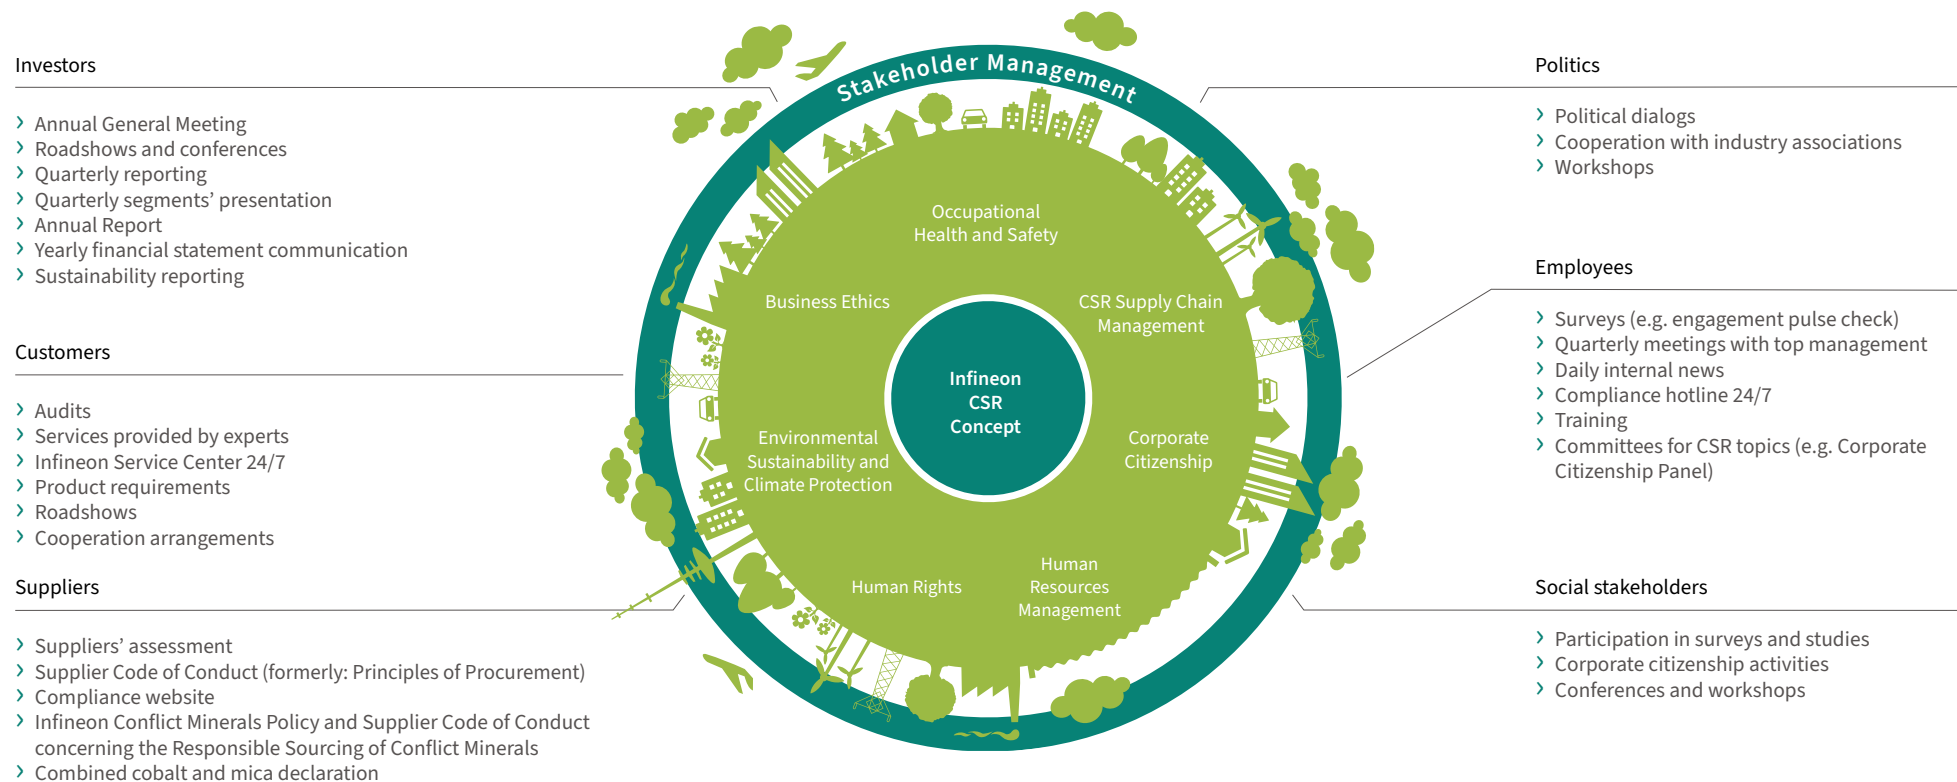

We understand Corporate Social Responsibility (CSR) as our voluntary responsibility towards society, both global and local. Our commitment is based on compliance with current legal requirements, the Ten Principles of the United Nations (UN) Global Compact and the principle of sustainability as the symbiosis of economy, ecology and social engagement.

Based on these tenets we have identified seven fields of activity: Occupational Health and Safety, CSR Supply Chain Management, Corporate Citizenship, Human Resources

Management, Human Rights, Environmental Sustainability and Climate Protection, and Business Ethics. [CHART 01](#)

We anchored our commitment to sustainability even more firmly in our organization by setting up a CSR Board in the 2021 fiscal year. It consists of two members of the Management Board and representatives of Infineon's specialist departments. The composition of the CSR Board enables it to cover the wide range of CSR topics and ensures that it can discuss current topics and determine at an early stage the measures the company should adopt.

CHART 01 Infineon CSR concept

About this report

This report documents Infineon's environmental and social performance during the 2023 fiscal year. We would like to illustrate how sustainability contributes to Infineon's business success and how our activities in this area create value for all our stakeholders.

Information on Infineon's financial status and performance in the 2023 fiscal year has been published in the Annual Report 2023. www.infineon.com/annualreport

In the 2023 fiscal year, the German CSR Directive Implementation Act requires Infineon to publish a Non-Financial Statement. This Non-Financial Statement is published as a combined separate Non-Financial Report within this Sustainability Report. The legally required information is contained in the chapters highlighted with a gray page border. References to information within the Combined Management Report are also a part of the Non-Financial Report. [p. 19 ff. of the Annual Report 2023](#)

In accordance with the EU Taxonomy Regulation and the related Delegated Acts, we disclose in this report the proportion of our Taxonomy-eligible Group-wide revenue, capital expenditure and operating expenditure and, for the first time, also the proportion of our Taxonomy-aligned Group-wide revenue, capital expenditure and operating expenditure for the 2023 fiscal year in relation to the environmental objectives: "Climate change mitigation" and "Climate change adaptation".

The reporting period covers the 2023 fiscal year, from 1 October 2022 until 30 September 2023. We publish this report annually. The previous report was published in November 2022 as a supplement to the Annual Report 2022. Unless otherwise specified, the statements and key figures in this report refer to the 2023 fiscal year. To help readers identify and interpret the trends relating to quantitative disclosures, the present report includes data from at least the 2022 and 2023 fiscal years. Data relevant to Cypress, which became part of Infineon in April 2020, are included in the carbon neutrality goal we set with the 2019 calendar year as the base year.

Reporting

This report has been prepared with reference to the GRI¹ Standards. These reporting criteria are complemented by corporate rules. In this report, Infineon also describes the measures implemented relating to the UN Global Compact principles (see the chapter "Our contribution to the UN Global Compact principles", [p. 60 f.](#)).

In the chapter "Sustainable Development Goals", Infineon also reports for the seventh time in a row on the processes and steps implemented to support the Sustainable Development Goals (SDG) of the UN. [p. 62 ff.](#)

With the completion of the acquisition of Syntronix Asia, the company became part of Infineon. Generally, the non-financial data of Syntronix Asia have been consolidated in this report. Where data from Syntronix Asia have not been included in the content of this report, this is explicitly disclosed in the relevant sections. Data from Syntronix Asia are not included in our reported figures for years up to and including the 2022 fiscal year.

KPMG AG Wirtschaftsprüfungsgesellschaft, Munich (Germany), has provided independent limited assurance regarding the specified sustainability performance information provided in this report in accordance with the "International Standard on Assurance Engagements 3000 (Revised)", the pertinent standard for assuring sustainability information. In addition, selected indicators were subject to a reasonable assurance audit. Two limited assurance reports by the independent auditor KPMG AG Wirtschaftsprüfungsgesellschaft are published at the end of this report and contain further information. [p. 71 ff.](#)

The Infineon website contains explanatory notes on the main data and other information pertaining to this report. www.infineon.com/csr_reporting

Determining the content of the report

Infineon engages in continuous dialog with its stakeholders. In our materiality analysis, we evaluate the expectations and requirements of our internal and external stakeholders with regard to sustainability in various topics in accordance with the framework for sustainability reporting, the GRI Standards.

¹ GRI: Global Reporting Initiative.

First, we identified Infineon's most important stakeholders, taking into account the dimensions set out in the Stakeholder Engagement Manual drawn up by the organization AccountAbility: responsibility, influence, proximity, dependency and representation. Secondly, consideration was given to general as well as sector-specific and company-specific sustainability standards appropriate for determining the material topics for assessing Infineon's sustainability performance. Thirdly, relevant topics were pre-selected based on our corporate strategy and stakeholder expectations. Finally, we assembled our in-house experts to discuss the topics chosen and any potentially related risks or opportunities that could impact the long-term performance of the organization. The various Infineon divisions and departments use different communication channels and continuously engage in conferences, forums, industry association activities and surveys to ensure targeted communication with the corresponding stakeholder groups. The legal definition of materiality was taken into account in the course of these four steps. The results of this analysis and the material topics were then confirmed by the Infineon Management Board. This report describes these topics. In accordance with the GRI Standards framework on sustainability reporting, [CHART 02](#) shows how Infineon evaluates impact along the value chain.

Effective risk and opportunity management is a key element of our business activities. It supports the achievement of our strategic goals, namely, sustainable profitable growth and ensuring efficient use of capital. We have established a variety of coordinated risk management and control system elements oriented towards the realization of our risk strategy. These elements include, in particular, not only the Risk and Opportunity Management System and the Internal Control System with Respect to Financial Reporting Processes but also the associated planning, management and internal reporting processes and our compliance management system. Further information is available in the chapter "Group strategy" as well as in "Risk and opportunity report" in the chapter "Report on outlook, risk and opportunity" in the Annual Report 2023.

▢ [p. 27 ff. and p. 65 ff. of the Annual Report 2023](#)

Progress during the 2023 fiscal year, the achievement of our targets, and the associated key performance indicators are described in this report as well as in the chapters "Business model" and "Group strategy" in the Annual Report 2023. [TARGETS](#) [p. 53 ff.](#) as well as [p. 20 ff. and p. 27 ff. of the Annual Report 2023](#)

⁴ Product application.

Long-term viability of core business: Semiconductors are crucial to solve the energy challenges of our time and shape the digital transformation. This is why Infineon is committed to actively driving decarbonization and digitalization. As a global semiconductor leader in power systems and IoT, we enable game-changing solutions for green and efficient energy, clean and safe mobility, as well as smart and secure IoT. We make life easier, safer, and greener. Together with our customers and partners. For a better tomorrow.

This opens the door to a new dimension of connectivity and intelligence with far-reaching consequences for our society and our economy. The International Data Corporation (IDC) estimates that the number of connected devices (especially IoT devices and systems) will rise to 55.7 billion by the 2025 calendar year.

By then, the data volume generated annually is expected to reach up to 80 zettabytes (1 zettabyte = 1,000,000,000 terabytes). Increasing connectivity opens up further opportunities for efficiency and also for decarbonization.

Our sensors, processors, security controllers, connectivity components and actuators set the standards for highly developed sensor technologies, cross-application control and optimized power management. They make the IoT context-aware, intelligent, secure and energy-efficient. Additional information about this material topic can be found in the chapters “Contribution through sustainable products” and “EU Taxonomy” of this report as well as in “The segments” in the chapter “Business model” and in the chapter “Group strategy” in the Annual Report 2023. [□ p. 37 ff. and p. 40 ff. in this report and p. 24 ff. and p. 27 ff. of the Annual Report 2023](#)

Contribution through sustainable products: Microelectronics made by Infineon is the key to attaining better living standards. Our inventiveness and commitment let us create value for customers, staff and investors. We understand how technical systems can be made increasingly efficient through the use of semiconductors, providing sustainable solutions for the world of today and the world of tomorrow. This makes our customers more successful and is an important contribution to society and to decarbonization. We make life easier, safer and greener – with technology that achieves more, consumes less and is accessible to everyone.

The manufacturing of sustainable products is an integral part of our business strategy. A large proportion of our annual expenditure on research and development is devoted to energy efficiency and climate protection.

According to the UN, the Earth will have up to 12.4 billion inhabitants by the 2100 calendar year, most of them living in cities. One consequence of this population growth will be a global rise in demand for energy. Generating energy from renewable resources rather than fossil fuels and using the energy produced more efficiently is one of the greatest challenges of the future, and semiconductors play a decisive role here. The biggest lever in energy savings is increasing efficiency of use. There are currently several hundred million industrial motors and billions of home appliances around the world, so the potential for energy savings is enormous.

In accordance with our environmental policy, possible environmental impacts are investigated at the earliest possible stage and are taken into account in the development of our products and processes. Infineon has created an integrated management system for this purpose, IMPRES (Infineon Integrated Management Program for Environment, Energy, Safety and Health). This applies to all our company activities, from procurement, development and manufacturing all the way to the sale of our products. All our actions are based on compliance with applicable legislation and regulations.

Additional information is provided in the chapters “Contribution through sustainable products”, “EU Taxonomy”, “Our responsibility along the supply chain” and “Sustainable Development Goals”. [□ p. 37 ff., p. 40 ff., p. 47 ff. and p. 62 ff.](#)

Infineon enables the development of renewable energy as well as the energy-efficient storage, transmission and use of green electricity, such as through intelligent building management systems and sustainable mobility. In addition, power semiconductors from Infineon are essential for the generation of wind or solar power and for the expansion of the private and public charging infrastructure. New semiconductor materials such as silicon carbide (SiC) and gallium nitride (GaN) and innovative package technologies increase the efficiency and range of electric cars and speed up the charging process. Moreover, connected and assisted driving, as well as secured communication between the vehicles and the infrastructure, help to optimize traffic flows and improve the safety and efficiency of traffic.

Additional information on this material topic can be found in “The Infineon carbon footprint” in the chapter “Contribution through sustainable products” in this report, as well as in “The segments” in the chapter “Business model” in the Annual Report 2023. [□ p. 38 of this report and p. 24 ff. of the Annual Report 2023](#)

Responsible manufacturing: Respect for human rights and the promotion of cultural diversity and equal opportunity are essential for Infineon. As a signatory of the UN Global Compact, Infineon made a voluntary commitment to uphold the Ten Principles outlined there.

Principles 1 and 2 relate to human rights. Infineon's Human Rights Policy supports our global CSR framework by including a detailed description of Infineon's priorities and setting out how we intend to ensure the respect for human rights within our operating segments and with our business partners worldwide. This policy applies to Infineon and all affiliated companies. In our Business Conduct Guidelines, we set out mandatory rules on respect for human rights. Additional information on these topics can be found in the chapters "Business ethics", "Human rights" and "Our contribution to the UN Global Compact principles". [▢ p. 14 ff., p. 17 f. and p. 60 f.](#)

We also demand that our supply chain upholds these principles. This is why we have defined a Group-wide approach aimed at ensuring the necessary transparency within the supply chain. We expect our suppliers to commit to the values outlined in our Supplier Code of Conduct. The chapter "Our responsibility along the supply chain" contains further information on this topic. [▢ p. 47 ff.](#)

The availability of natural resources is one of the greatest global challenges. Efficient resource management is therefore a central component of IMPRES. In the past, energy prices have been subject to fluctuations that were partly related to legal regulations. The economic benefit is another motivation for reducing our specific consumption by increasing our energy efficiency and has been part of our sustainability strategy for years.

Manufacturing semiconductors requires a wide variety of chemicals. At Infineon, we ensure that we handle hazardous materials in a highly responsible way.

We are subject to many laws and regulations that apply to areas such as environmental and climate protection, as well as the field of energy. Present or future environmental legislation and other government regulations, or amendments thereto, could require an adjustment to our operating activities and result in higher costs. Infineon keeps abreast of planned legislative changes and engages in these issues in various associations and organizations on an ongoing basis.

Infineon has set itself the target of becoming carbon-neutral by the end of the 2030 fiscal year with respect to scope 1 and scope 2 emissions. By the end of the 2025 fiscal year, Infineon aims to have already achieved 70 percent of this target (compared with the 2019¹ calendar year). The Group presented its plans at the Annual General Meeting back in the 2020 fiscal year in Munich (Germany). Infineon wants to make an active contribution to global CO₂ reduction and to the implementation of the targets set out in the Paris Climate Agreement.

Additional information on these topics can be found in the chapters "Protection of our employees", "Environmental sustainability and climate protection", "Contribution through sustainable products", "EU Taxonomy" and "Sustainable Development Goals". [▢ p. 26 f., p. 28 ff., p. 37 ff, p. 40 ff. and p. 62 ff.](#)

Diversity and equal opportunity: To create the best Infineon for everyone, we consider all the characteristics and personality traits that make up each individual. Thus, we create a corporate culture that values the individuality of each employee and promotes equal opportunities. International customer relationships demand intercultural competence. Qualified job applicants expect an open working environment in which they can flourish, be accepted and feel that they belong. As an international company, staff diversity is particularly important to us. The promotion of women to leadership positions is a key focus. Changes within the organization that support, among other things, the successful career development of female managers are prerequisites for meeting our targets.

Promoting a healthy work-life balance is also essential for the professional success of our employees and is part of our human resources work. As emphasized in our Business Conduct Guidelines, we want to create an environment that provides both personal and professional opportunities for our employees. When we make human resources decisions, such as selecting, hiring, evaluating and promoting personnel, or organizing job changes, remuneration or staff training, we are guided by the principle of equal opportunities, relevant qualifications and performance. Equal opportunities also apply to the various internal diversity dimensions: sexual orientation and identity, age, ethnic origin and nationality, religion and ideology, and physical and mental ability.

¹ In line with our carbon neutrality goal, with the 2019 calendar year as the base year, the relevant data of Cypress are included.

Additional information on this material topic can be found in the chapters “Business ethics” and “Human rights” and in “Encouraging diversity” in the chapter “Human resources management” as well as in the chapter “Sustainable Development Goals”.

▢ [p. 14 ff., p. 17, p. 21 f. and p. 62 ff.](#)

Corporate citizenship: At our sites, we support local communities in line with our sustainable business strategy. We are present at locations around the world dedicated to sales, research and development as well as manufacturing. The global presence of our sites is illustrated in “Headquarters and manufacturing sites” in the chapter “Business model” as well as in “R&D sites and application centers” in the chapter “Research and development” in the Annual Report 2023. ▢ [p. 23 and p. 36 of the Annual Report 2023](#)

With our presence in different regions, we benefit the communities in various ways – by creating jobs, with our innovative products and solutions and with the taxes we pay, as well as through our societal and social commitment as part of our corporate citizenship activities.

Examples of Infineon’s engagement are set out in the chapters “Corporate citizenship” and “Sustainable Development Goals”. ▢ [p. 50 ff. and p. 62 ff.](#)

Business ethics: To meet our own business ethics standards and, at the same time, act as a sustainable and responsible partner towards our stakeholders, we must consider, evaluate and address the risks both within and outside the company. Each year, as part of the compliance management system, a formal assessment of our risks takes place, focusing in particular on corruption and antitrust law. The measures to be taken are summarized in the compliance program and implemented during the fiscal year.

Employees and business partners can report any possible breaches to the usual internal bodies (Management, Human Resources and Compliance) or contact our Infineon Integrity Line, which also accepts anonymous reports. The Business Conduct Guidelines define our basic principles for ethical and legal conduct. They are an important foundation for our everyday activities and apply to all employees and members of

corporate bodies around the world when dealing with one another and with our customers, investors, business partners and the public. Infineon reports on the measures implemented relating to the principles set out in the UN Global Compact (in the chapter “Our contribution to the UN Global Compact principles”. ▢ [p. 60 f.](#))

Additional information on this material topic is given in the chapters “Business ethics”, “Human rights” and “Sustainable Development Goals” in this report, as well as in “Statement on Corporate Governance pursuant to sections 289f and 315d of the German Commercial Code (HGB)” in the chapter “Corporate Governance” in the Annual Report 2023. ▢ [p. 14 ff., p. 17 f. and p. 62 ff. of this report and p. 86 of the Annual Report 2023](#)

Labor relations: We are convinced that effective human resources and a secure working environment are prerequisites to our business success. Long-term high performance is only viable with satisfied and successful employees. In our strategic priorities (“Race for Talent”, “Upskilling & Leadership Development”, “Delivery Excellence” and “Set-up for Success”), we summarize all the daily activities we undertake to promote employees’ performance and realize their potential in the best possible way.

In our Business Conduct Guidelines, we commit to protecting international human rights and labor standards, including protecting personal dignity and the privacy of every individual. Additional information about this is given in the chapters “Business ethics”, “Human rights” and “Our contribution to the UN Global Compact principles”. ▢ [p. 14 ff., p. 17 f. and p. 60 f.](#)

Our Occupational Safety and Health Management System has been certified in accordance with ISO¹ 45001 and is designed to ensure that the necessary measures are taken to minimize risks identified in the working environment that could endanger our employees.

Additional information on this material topic is given in the chapters “Human resources management”, “Protection of our employees” and “Sustainable Development Goals”. ▢ [p. 19 ff., p. 26 f. and p. 62 ff.](#)

¹ ISO: International Organization for Standardization.

Business ethics

As part of a risk-based training concept, all employees are automatically enrolled in Business Conduct Guidelines training on an ongoing basis. For selected target groups, this also applies to training on the topics of corruption prevention and antitrust law. More training sessions are constantly being developed and provided to ensure that knowledge of compliance topics is sustained and becomes embedded in the company.

- › Labor relations

TARGETS

p. 53 ff.

Infineon is committed to do not only what is legally permissible but also what is ethically right. We live in a culture in which high levels of integrity, reliability and quality are vital to win the trust of customers, investors and employees. For us, this means that we make commitments that are achievable and promises we can keep. Infineon requires that its employees and business partners respect and observe all applicable laws, rules and regulations. Essential principles of ethical behavior are defined in Infineon's Business Conduct Guidelines¹ and CSR Policy. Some of these principles go beyond the legal requirements, in which case we are guided by international standards and principles, such as the International Bill of Human Rights or the UN Global Compact principles.

In order to implement these principles, Infineon has introduced a compliance management system for all Group companies. The compliance management system includes an annual formalized risk assessment, dealing in particular with corruption and antitrust law. The measures that need to be taken identified in the assessment are summarized in the compliance program and implemented during the fiscal year. The risk assessment entails both analyses at the Group level and structured interviews at the site and central function levels. The assessment essentially confirmed the known risk areas. The compliance program therefore includes detailed training and communication measures, business partner checks, internal controls, processes and tools, the revision of regulations and general advice on compliance issues.

The Corporate Compliance Officer, heading a worldwide team, is responsible for coordinating the compliance management system. The Corporate Compliance Officer reports directly to the Chief Financial Officer and on a quarterly basis to the Management Board, as well as to the Supervisory Board's Investment, Finance and Audit Committee. In addition to the development of our compliance program, the officer helps create guidelines, advises employees, receives complaints and information on relevant issues and heads the investigation of compliance cases.

Reviews of the compliance management system are conducted by Internal Audit. Employees and business partners also took advantage in the 2023 fiscal year of the opportunities available, both internally (Management, Human Resources and Compliance) and externally (Infineon Integrity Line), to report actual or suspected violations during the year. In the 2023 fiscal year the number of reports made and investigations conducted remained virtually constant. These trends are shown in [CHART 03](#) on the following page. We attribute this mainly to the fact that employees continue to be encouraged to report any actual or suspected violations. When assessing possible breaches, Infineon distinguishes between various degrees of severity.

¹ The Business Conduct Guidelines have been published in 17 languages.

A number of employees in the low double digits left Infineon as a result of a compliance case, either after the termination of their employment or voluntarily. Moreover, in other cases, sanctions in accordance with labor law were imposed, such as cautions and formal warnings.

The Business Conduct Guidelines form the central element of our compliance management system. As a code of conduct, the Guidelines are an essential basis for our daily actions and apply to all employees and members of corporate bodies worldwide when dealing with one another, our customers, investors, business partners or the public. All the company's employees and members of corporate bodies are trained on the content on a regular basis in web-based sessions, virtual sessions (via Webex) or face-to-face. Since the 2021 fiscal year, all employees have been automatically enrolled in web-based Business Conduct Guidelines training (which forms part of the learning management system) on an ongoing basis.

CHART 03 Reports of possible compliance breaches

¹ One additional case was only documented after the editorial deadline in December 2022.

This also applies to training for selected target groups on the topics of corruption prevention and antitrust law. All web-based training sessions are repeated every three years. As part of our compliance training concept, we are also constantly developing more training formats with new content (such as microlearning and virtual formats) to ensure sustained knowledge transfer of relevant compliance risks in target groups with higher risk exposure. The training concept is accompanied by regular communications, including podcasts, articles and posts on the Intranet ("eMag"), in order to embed compliance topics and processes in the company. Business partners are contractually obliged to comply with the legal regulations. Suppliers acknowledge our Supplier Code of Conduct when signing the contract. In addition, we conduct business partner checks to ensure that we work together with law-abiding business partners with integrity.

Tax management and governance

Our business activities worldwide generate a variety of different taxes in the various countries, including corporate taxes, production taxes and other levies. Infineon also pays income taxes for its employees. The same applies to indirect taxes such as VAT (value-added tax). The taxes paid are an important part of our economic contribution in the countries where we operate. With our Tax Compliance and Governance Report, we disclose tax management and related governance matters and create an important basis for dialog with our stakeholders. Here, we conduct a continuing assessment of legal and regulatory requirements and the interests of these stakeholders. The Tax Compliance and Governance Report can be downloaded from our website.

www.infineon.com/tax_report

Personal data and the protection of privacy

Data protection is a high priority for Infineon. Our clear objective is always to process the personal data of employees, customers, interested parties, suppliers, investors and other partners in accordance with globally applicable data protection laws.

With the data protection management system, which we have been operating successfully for many years and are continuously improving, we have adopted a structured and systematic approach that ensures compliance with globally applicable data protection laws. Within our management system, continual assessments are performed of changes to the legal framework, and potential improvements are identified. The main results of these assessments are reported to management all the way up to selected members of the Management Board, and appropriate measures are taken in response.

We process and use personal data only for legitimate purposes and do not sell these data.

Further information on this subject can be found on the Infineon website.

www.infineon.com/DPMS

Diversity in Infineon's corporate bodies

The promotion of diversity within the company is an important factor in corporate success. At the balance sheet date, 30 September 2023, the Supervisory Board consisted of 16 members in total, nine men and seven women. Two of the members were between 30 and 50 years old, while 14 members were over 50. [CHART 04](#) and [CHART 05](#) The Management Board consisted of five members as of the balance sheet date, including one woman. All the members of the Management Board were over 50 years old.

[CHART 04](#) Supervisory Board age structure

[CHART 05](#) Supervisory Board by gender

Human rights

Respect for human rights and the promotion of fair working conditions form the basis of our corporate culture.

TARGETS

p. 53 ff.

Material topics

- › Responsible manufacturing
- › Diversity and equal opportunity

- › Labor relations

Standards and principles

Respect for internationally proclaimed human rights and compliance with labor standards is a matter of course for us. We support and respect international standards and principles, such as the International Bill of Human Rights and its Universal Declaration of Human Rights, the fundamental principles of the International Labour Organization (ILO), the principles of the UN Global Compact and the UN Guiding Principles on Business and Human Rights. We do not tolerate human rights abuses in any form, nor any form of forced labor, slavery, involuntary prison labor or child labor. The term “child” refers to persons under the age of 15. Exceptions apply for certain countries subject to ILO Convention 138 (minimum age reduced to 14 years) or for job training or training programs that are authorized by the respective government and demonstrably promote those participating. All work is performed without coercion of any kind and can be terminated by us and by our employees, provided reasonable notice is given. Our employees are compensated in accordance with applicable wage legislation and in compliance with the locally applicable minimum wage, regulations on overtime hours and legally prescribed additional benefits.

Guidelines and publications

In the 2023 fiscal year, we published Infineon’s Human Rights Policy. This describes the setting of our priorities and sets out in detail how Infineon intends to make vigorous efforts to ensure human rights are respected worldwide in the course of its business operations and with its business partners. The policy complements our CSR Policy, our Business Conduct Guidelines and our Supplier Code of Conduct.

Infineon has enhanced the human rights risk management system with the aim of ensuring compliance with applicable laws and regulations, identifying and minimizing risks related to human rights in Infineon’s business operations and the supply chain, and striving for continuous improvement.

In the 2023 fiscal year, we introduced worldwide another important component of this framework, a separate human rights training module. This module explains fundamental human rights and the role of companies and international organizations in ensuring respect for human rights, as well as the measures taken by Infineon and the role of every individual in protecting human rights. Human rights training is available in different languages, mandatory for all Infineon employees worldwide and needs to be repeated every three years.

In the 2022 fiscal year, a Human Rights Officer with global responsibility as defined by the German Supply Chain Due Diligence Act (German: Lieferkettensorgfaltspflichten-gesetz, or LkSG) was appointed.

Our Business Conduct Guidelines reflect our ethical principles and are the main foundation for our everyday conduct. The Guidelines specify our requirements with regard to labor, ethics and integrity, the prohibition of child and forced labor, working hours and non-discrimination (see the chapter “Our contribution to the UN Global Compact principles”, [p. 60 f.](#)). Our employees around the world receive regular training on the Business Conduct Guidelines. In addition, there is a whistleblower hotline, which our employees, suppliers, customers and business partners can contact openly or anonymously. All cases reported are investigated by our compliance experts (see the chapter “Business ethics”, [p. 14 ff.](#)). In the case of potential human rights abuses, the Human Rights Officer is involved in the process. The compliance management system ensures that reported violations of human rights and applicable labor standards are reported to the Management Board.

Our CSR Policy describes our focus areas in relation to this topic and our voluntary commitment to implement the measures required. The CSR Policy is taken into consideration in our everyday business and applies to all our business relationships with our stakeholders.

The Infineon Technologies Slavery and Human Trafficking Statement, which was published in the context of the California Transparency in Supply Chains Act of 2010 and the United Kingdom Modern Slavery Act of 2015, underlines our complete rejection of any form of human trafficking or slavery. Infineon requires its suppliers to comply with all applicable laws, including those dealing with respect for human rights, as well as with fair business practices (see the chapter “Our responsibility along the supply chain”, [p. 47 ff.](#)). Additional detailed explanations are given in “Statement on Corporate Governance pursuant to sections 289f and 315d of the German Commercial Code (HGB)” in the chapter “Corporate Governance” in the Annual Report 2023.

[p. 86 of the Annual Report 2023](#)

Human resources management¹

Our employees are the focus of our actions. This is reflected in all areas of human resources. We aim to find the best talent and to continue to develop and retain our employees and managers.

TARGETS

p. 53 ff.

Material topics

- > Diversity and equal opportunity
- > Labor relations

Our engagement in human resources (HR) is an essential factor in our efforts to achieve sustainability. Our conviction that only contented and successful employees will ensure high performance in the long run characterizes all our employee development measures as well as our measures for attracting new employees. We use regular employee surveys to monitor our progress with regard to employee satisfaction.

In addition to the HR department, the Chief Executive Officer of Infineon Technologies AG, in the role of Labor Director, is directly involved in HR policy. On a regular basis, the strategic deployment of HR management is discussed with all members of the Management Board, and the objectives for the following fiscal year are defined. Our HR strategy is explained in greater detail in the Annual Report 2023. [p. 33 of the Annual Report 2023](#)

The HR concepts based on this strategy are described below.

Development of employees and managers

An organization cannot progress without open and honest feedback. This basic premise is reflected in our values, which are collectively defined in our “High Performance Behavior Model”. These values are not purely theoretical: the “High Performance Behavior Model” shows how we aim to achieve Infineon’s targets and set its priorities. [CHART 06](#)

CHART 06 High Performance Behavior Model

¹ Following the acquisition of Syntronix Asia, the human resource management processes/definitions are currently still in the harmonization phase and will apply once the harmonization phase has been completed. As a result, the information published in this chapter does not include data from Syntronix Asia.

These descriptions of conduct play a significant role in the global Steps To Employees' Personal Success (STEPS) process. At the beginning of each fiscal year, employees and managers agree on targets and behavioral criteria within the STEPS framework. The process concludes at the end of the fiscal year with a feedback and appraisal interview. Feedback from teams to their managers is just as important as feedback from managers to their staff. Therefore, in addition to the STEPS dialogs, we have also established the format of Leadership Dialog, which is carried out every two years for all our managers, starting from the Director level, who have direct responsibility for five or more employees.

Good leadership is essential to Infineon's success. In the 2019 fiscal year, we defined what "excellent leadership" means at Infineon and the conduct expected of managers as a result. In the 2023 fiscal year, we refined this to take account of current challenges and dynamics. The Infineon Leadership Principles contain eight expectations of conduct and the corresponding operationalization. Our Leadership Principles supplement the High Performance Behavior Model and provide guidance on management issues. [CHART 07](#)

[CHART 07](#) Leadership Principles

We support our managers in the successful implementation of the Principles and in their management tasks with numerous learning and development opportunities at the various leadership levels. We work on specific examples at face-to-face training events and in eLearning sessions (web-based training). Mentoring programs and learning-in-tandem also promote networking and achieve learning results that can quickly be put into practice. The Infineon Leadership Excellence Program provides a training framework to support managers as far as possible in their leadership role and with management responsibility. In addition to this program, we also offer training on a range of topics required for specific target groups, such as the New Leader Orientation Program – an in-house workshop for new managers. In addition, in the 2022 calendar year, Infineon rolled out the Infineon General Management Program (IGMP) for its top management. In this training program in collaboration with INSEAD Business School, we inform our managers about relevant trends and topics including strategy, innovation, leadership and finance.

Promoting talent

At Infineon, development opportunities are available to employees, depending on their individual knowledge and talents, in a variety of careers based on Infineon's needs. Four career paths have been established: the Individual Contributor path for professional careers, the Technical Ladder for technical experts, the Project Management career, and the Management career track.

Training programs specific to the target group were developed in the 2020 fiscal year for all four career paths. These promote the development of relevant leadership skills.

As an international company, we want to offer our staff professional development opportunities that go beyond organizational and national boundaries. The summits, at which managers discuss talent development with the HR team, are an important instrument in this endeavor.

Health management

The commitment, performance and, fundamentally, the health of our employees make vital contributions to our success. The task of our health management is to maintain and improve the health of our employees. Our global management system IMPRES ensures the high quality of the services and measures we offer.

In the course of the coronavirus pandemic, we were also able to devise measures to provide an appropriate response to specific situations on site. Health management works closely together with occupational health and social counseling services at the various sites and helps provide a healthy range of foods and an effective health program. One example in Germany is provided by training measures in the area of “Healthy Leadership”.

Encouraging diversity

The diversity of our employees is particularly important to us. We live in a culture that appreciates the individuality of each and every person. Therefore, we are committed to providing a working environment in which everyone can make their contribution, free of prejudice and able to benefit from equal opportunities – irrespective of age, ethnic origin or nationality, gender, physical or mental ability, religion or ideology, sexual orientation or identity.

Our global Diversity & Inclusion approach is the basis for our activities, enabling our Diversity & Inclusion managers and local HR managers to support the needs of our employees effectively on the ground. Valuing the individual skills and qualities of all our employees and enhancing them through training is very much part of our corporate culture. The global starting points of our Diversity & Inclusion approach are: awareness and competence, age diversity, gender diversity, cultural diversity and achieving a work-life balance.

CHART 08 Women in management positions

The promotion of women to management positions is one of the key focus areas of our Diversity & Inclusion activities. At the end of the 2023 fiscal year, the percentage of women in middle and senior management positions was 17.1 percent. [CHART 08](#) We continue to pursue our long-term goal of increasing the proportion of women in management positions to 20 percent by 2030. This long-term goal is also reflected in the remuneration system for the Management Board laid down by the Supervisory Board.

In compliance with the German Law on Equal Participation of Women and Men in Leadership Positions in the Private and Public Sector, Infineon Technologies AG and Infineon Technologies Dresden Verwaltungs GmbH set themselves targets for the percentage of women in the first two leadership levels below the Management Board / Board of Directors. These targets were redefined in the 2022 fiscal year and apply until 30 June 2027, or, in the case of Infineon Technologies Dresden Verwaltungs GmbH, until 30 June 2025. The results and details on the targets can be found in our Statement on Corporate Governance on the Infineon website. www.infineon.com/declaration-on-corporate-governance

Infineon employs 57,904 people of different nationalities. The five most prevalent nationalities represent a total of 66.8 percent of the workforce, with Malaysian nationals accounting for 26.8 percent and German nationals for 22.2 percent. [CHART 09](#)

CHART 09 Employees by nationality

Employees by management class and age structure

	Employees total	Under 30 years ¹	30 to 50 years ¹	Over 50 years ¹
Middle and senior level management ^{2,3}	10,901	0.1	57.4	42.5
Entry level management ²	12,699	5.2	79.4	15.4
Non-management staff	34,304	35.4	52.4	12.2
Total	57,904	22.2	59.2	18.6

1 Figures expressed in percent based on the workforce as of 30 September 2023 in the respective comparison group.

2 At Infineon, the management function includes not only the leadership of employees but also leadership through specialist expertise as well as project management functions as defined in the internal job evaluation system.

3 Including the Management Board.

Gender distribution and age structure: Out of 20,675 female employees, 27.8 percent are under 30 years old, 59.1 percent are in the middle age group and 13.1 percent are over 50 years old. Out of 37,229 male employees, 19.0 percent are under 30, 59.3 percent are in the middle age group, and 21.7 percent are over 50 years old.

Employees by management class and gender¹

	Employees total	Female ²	Male ²
Middle and senior level management ^{3,4}	10,901	17.1	82.9
Entry level management ³	12,699	30.8	69.2
Non-management staff	34,304	43.4	56.6
Total	57,904	35.7	64.3

1 In the 2023 fiscal year, Infineon received no notifications worldwide of employees who described their gender as "diverse".

2 Figures expressed in percent based on the workforce as of 30 September 2023 in the respective comparison group.

3 At Infineon, the management function includes not only the leadership of employees but also leadership through specialist expertise as well as project management functions as defined in the internal job evaluation system.

4 Including the Management Board.

Qualifications and training

We see ourselves as enablers paving the way for outstanding performance. The continuing education of our staff is therefore important to us. We support our staff in developing their individual skills as much as possible and in applying those skills to the success of Infineon.

In the 2023 fiscal year, our staff participated in a total of 874,038 hours of training. 31.4 percent of training hours were provided to female employees and 68.6 percent to male employees. Production training hours accounted for most of the hours utilized, at 52.9 percent.

Training hours¹ per employee and functional area

	Per employee
Production	12.42
Research and development	22.56
Sales and marketing	20.28
General administration	13.99
Total	15.38

1 Calculated on the basis of the monthly workforce in the 2023 fiscal year.

Training hours¹ by management class and gender²

	Per employee	Female	Male
Middle and senior level management ^{3,4}	18.32	21.50	17.67
Entry level management ³	24.63	25.73	24.16
Non-management staff	11.08	9.45	12.35
Total	15.38	13.51	16.42

1 Calculated on the basis of the monthly workforce in the 2023 fiscal year.

2 In the 2023 fiscal year, Infineon received no notifications worldwide of employees who described their gender as "diverse".

3 At Infineon, the management function includes not only the leadership of employees but also leadership through specialist expertise as well as project management functions as defined in the internal job evaluation system.

4 Including the Management Board.

Our range of functional training is made available primarily via the global functional academies (operating in specific segments and fields). Together with other internal trainers, these academies work together to provide coordinated learning that builds professional expertise. For example, there are academies in the fields of procurement, finance, manufacturing, quality management and the supply chain. With the online training platform LinkedIn Learning, Infineon offers another modern learning channel for its employees. By the end of the 2023 fiscal year, 38,906 Infineon employees had activated their LinkedIn Learning license. This number includes shop floor employees without company devices. In total, 82,812 study hours have been completed.

Where it makes sense, Infineon has moved towards blended learning formats for its training. This means that, in these cases, we provide training for our employees and managers in a combination of virtual and classroom-based formats. In addition, we are fostering the use of LinkedIn Learning. A further rise in training costs is explained by a higher level of demand as well as additions to the global training portfolio and the reduction in local programs. [CHART 10](#)

CHART 10 Training expenses

€ in millions

Fringe benefits

Fringe benefits are a longstanding tradition at Infineon and are offered in various forms. All benefits form an integral part of the overall remuneration system and reflect Infineon’s responsibility to its staff. The scale and nature of the benefits are determined in accordance with the relevant regional statutory and standard market requirements. No distinction is made in this respect between full-time and part-time staff.

In Germany, Austria, Asia-Pacific, Greater China and Japan, in addition to employer and employee-financed pension plans, benefits granted include the items listed below (the exact arrangements are specific to each site):

Industrial accident insurance	Company car for work or as an additional benefit
Paid sick leave beyond the statutory minimum	Private car leasing from gross deferred compensation
Continued payment of wages to surviving dependents in the event of death	Long-service awards
Sabbaticals	Preventive health programs
Flexible transition to retirement pension	Family-friendly services, such as in-house kindergartens or working together with local organizations offering daycare facilities and vacation care for children

In addition to the benefits above, in Asia-Pacific, Greater China and Japan, site-specific group life insurance and group hospital insurance are also offered, extending beyond the statutory requirements. One noteworthy example is the attractive company pension plan in the USA. Infineon also encourages various work-time models intended to keep working hours flexible, depending on individual employees’ circumstances. These models include trust-based working hours, part-time work and teleworking arrangements. Thus, for example, in Asia-Pacific, Greater China and Japan, all sites already offer flexible working and/or teleworking.

Compensation

Infineon wants to attract and retain the best available talent and, for that reason, attractive, market-oriented remuneration and appropriate participation in the company's success are a matter of course. We pay our staff based on work-related criteria, such as job requirements and performance, and in line with local market requirements. Gender differences have no impact on our human resources decisions. This is reflected in our low gender pay gap, which was 0.43 percent in the 2023 fiscal year. Each employee receives appropriate, transparent remuneration for their work in compliance with all legal standards.

Number of employees

Infineon is active on a worldwide basis. About half the 57,904 employees (previous year: 55,502) worked in Asia-Pacific, Greater China and Japan (28,648 employees). 41.5 percent of all employees were employed in Europe (24,043); the majority of these were employed in Germany (14,813).

Employees by region and gender¹

	2023			2022		
	Total	Female	Male	Total	Female	Male
Europe	24,043	6,546	17,497	22,494	5,978	16,516

Japan	678	100	578	661	89	572
Total	57,904	20,675	37,229	55,502	19,950	35,552

¹ In the 2023 fiscal year, Infineon received no notifications worldwide of employees who described their gender as "diverse".

As of 30 September 2023, in the workforce as a whole, 1,874 female employees and 2,431 male employees had fixed-term contracts and 18,801 female employees and 34,798 male employees had permanent contracts. A total of 2,533 employees were working part-time as of that date.

Employees who, for example, are on parental leave or in the non-working phase of early retirement part-time working arrangements, are not active employees and are therefore not included in the tables on this page.

Temporary agency staff are also excluded. As of 30 September 2023, 3,051 temporary employees were working for Infineon worldwide. Of these, 68.3 percent worked in production, giving Infineon the flexibility in its manufacturing to deal with fluctuations in capacity utilization.

As of 30 September 2023, Infineon also employed a total of 923 apprentices and students in work-study programs, 161 interns and 1,877 working students. 566 new apprentices and students in work-study programs were hired in the 2023 fiscal year.

Employees¹ by contract type

		2023			2022		
		Total	Full-time	Part-time	Total	Full-time	Part-time
Employees on permanent contracts	Male	34,798	33,637	1,161	32,986	31,884	1,102
	Female	18,801	17,465	1,336	18,030	16,766	1,264
Employees on fixed-term contracts	Male	2,431	2,420	11	2,566	2,554	12
	Female	1,874	1,849	25	1,920	1,898	22
Total		57,904	55,371	2,533	55,502	53,102	2,400

¹ In the 2023 fiscal year, Infineon received no notifications worldwide of employees who described their gender as "diverse".

New hiring and fluctuation rates

Fluctuation rates and the number of new hires are important indicators for us in our efforts to satisfy our demand for high performance and to achieve excellence in management. In the 2023 fiscal year, there were 5,934 new hires worldwide, of which 2,159 were female and 3,775 male. [CHART 11](#)

2,956 employees were under the age of 30, 2,714 employees were in the age group of 30 to 50 and 264 employees were over the age of 50. [CHART 12](#)

Worldwide, there were 3,893 staff departures from Infineon in the 2023 fiscal year. Of these, the majority (1,609 employees) were in the Asia-Pacific region, where most new recruitment also occurred (2,662 employees).

Rates of new hires and terminations by region

	Total	Europe	Therein: Germany	Asia- Pacific	Greater China	Japan	America	Therein: USA
Newly hired employees	5,934	2,296	1,188	2,662	332	52	592	412
Rate of newly hired employees ¹	10.2	9.5	8.0	10.7	11.0	7.7	11.4	11.1
Staff departures	3,893	1,132	593	1,609	224	36	892	677
Rate of staff departures ²	6.8	4.8	4.1	6.6	7.4	5.4	16.9	17.9

1 Figures expressed in percent based on the workforce as of 30 September 2023 in the respective region.

2 Figures in percent, calculated on the basis of the monthly workforce in the 2023 fiscal year.

[CHART 11](#) Female/male¹ employees new entries

1 In the 2023 fiscal year, Infineon received no notifications worldwide of employees who described their gender as "diverse".

Of the departures, 1,507 were women and 2,386 men. 1,296 employees were in the under 30 age group, 1,733 in the middle age group (30 to 50 years) and 864 in the over 50 age group. The worldwide employee fluctuation rate during the 2023 fiscal year was 6.8 percent (previous year: 9.0 percent).

Age structure and length of service

Demographic change also impacts the age structure at Infineon. In order to counteract the effects of demographic change at the individual sites, we take appropriate steps in the areas of work organization, qualification and knowledge transfer, talent management, health management as well as corporate and management culture, depending on local need. The average age of employees worldwide in the 2023 fiscal year was 39.3 years (previous year: 39.3 years). The proportion of employees below 30 years of age fell to 22.2 percent (previous year: 22.7 percent). On the other hand, the proportion of employees in the middle age group increased (2023 fiscal year: 59.2 percent; previous year: 58.6 percent). The proportion of employees over the age of 50 fell slightly (2023 fiscal year: 18.6 percent; previous year: 18.7 percent). [CHART 12](#)

The average length of service remained stable at 9.6 years (previous year: 9.6 years).

[CHART 12](#) Age structure at Infineon

Protection of our employees

In the 2023 fiscal year, we invested around 51,367 hours in training and continuing education for our fire protection and occupational safety and health experts worldwide.

TARGETS

p. 54 ff.

Material topics

- › Responsible manufacturing
- › Labor relations

Ensuring a safe working environment is a very high priority at Infineon. Here we take a preventive approach. Our Occupational Safety and Health Management System has been certified in accordance with ISO 45001. Workplace-related risk assessments carried out worldwide ensure that workplace-related risks that may result in a danger to employees are identified, and the protective measures required are implemented to minimize risks. Risks are evaluated according to the Nohl¹ risk matrix, and measures are subsequently adopted based on the STOP² hierarchy. This means that substitution and technical measures take precedence over organizational or personal measures such as personal protective equipment.

As another element in our preventive approach, in the 2018 fiscal year we introduced the seven Golden Rules of Safety as part of our behavior-based safety program. We will continue to apply this program. This preventive safety concept is reviewed and developed on a regular basis. Reports are then presented to management, including selected members of the Management Board. Qualified safety experts supervise the implementation of the protective measures. Creating safe and ergonomic workplaces is a matter of course for us.

In addition to work areas in production and other technical areas, office workplaces are also analyzed to assess how they could be improved. One example from everyday practice is the information brochure for our corporate headquarters Campeon (Germany), which includes tips and advice on topics such as the room climate and office acoustics.

In the area of fire prevention, we carried out regular safety training sessions and evacuation drills.

The recording and evaluation of work-related accident figures in the course of our general data collection process are performed in accordance with GRI Standards requirements on the basis of the standardized Injury Rate and the Lost Day Rate. All work-related accidents that have led to more than one lost day have been taken into account.

¹ Nohl: A method devised by Jörg Nohl used to evaluate and assess occupational safety risks.

² STOP: Substitution, Technical Protective Measures, Organizational Protective Measures, Personal Protective Measures.

There were no fatal work-related accidents at Infineon in the 2023 fiscal year. Our Injury Rate of 0.36 in the 2023 fiscal year is presented in [CHART 13](#). It fell slightly compared with the previous year. One of the reasons for this is the increased use of

mobile working as part of Infineon’s hybrid work initiative. In the 2023 fiscal year, the Lost Day Rate increased slightly to 5.46 and is illustrated in [CHART 14](#).

[CHART 13](#) Injury Rate¹

¹ The Injury Rate is calculated as follows: total number of injuries/total hours worked x 200,000. Vacations and public holidays are included in the working hours.

[CHART 14](#) Lost Day Rate¹

¹ The Lost Day Rate is calculated as follows: total number of lost days/total hours worked x 200,000. Vacations and public holidays are included in the working hours.

Environmental sustainability and climate protection

Infineon has set itself the target of becoming carbon-neutral by the end of the 2030 fiscal year. Even before the end of the 2025 fiscal year, Infineon aims to have achieved 70 percent of this target¹.

TARGETS

p. 54 ff.

Material topic

› Responsible manufacturing

Our global management system IMPRES integrates targets and processes relating to environmental sustainability as well as occupational safety and health. IMPRES has been certified worldwide in accordance with environmental management system standard ISO 14001 and in accordance with occupational health and safety standard ISO 45001. Additionally, it has been certified in accordance with the energy management system standard ISO 50001 at our largest European manufacturing sites as well as at our corporate headquarters Campeon (Germany). Changes in legal requirements and potential improvements in performance are continuously evaluated as part of our integrated management system. The main results of the evaluations are reported to management, including selected members of the Management Board, and the appropriate measures are decided on.

Sustainable use of resources at our manufacturing sites

Climate change is a global challenge. The consequences of changing climate conditions threaten regional ecosystems and present major challenges to humans. Climate change can only be tackled if all the players in society plan ahead and act boldly and decisively together. Countries, businesses and private individuals will increasingly need to consider social, ecological and economic aspects when making decisions. Comprehensive climate protection and sustainable action will be essential for success. In this context, another vital task will be dealing with the limited availability of natural resources to preserve our planet for future generations. Increasing resource efficiency offers both ecological and economic potential and is therefore a key pillar in our sustainability strategy.

Carbon neutrality and energy efficiency

Our carbon neutrality goal

Today, Infineon is already making a valuable contribution to climate protection through its products and solutions and its own efficiency measures. We plan to do even more. Infineon has set itself the goal of becoming carbon-neutral by the end of the 2030 fiscal year in terms of scope 1 and scope 2 emissions. We want to make an active contribution to global CO₂ reduction and to the implementation of the targets set out in the Paris Climate Agreement. By the end of the 2025 fiscal year, Infineon is aiming to reduce its own emissions by 70 percent compared with the 2019 calendar year. In the 2023 fiscal year, KPMG AG Wirtschaftsprüfungsgesellschaft, Munich (Germany) conducted an independent reasonable assurance audit, inter alia, of Infineon's scope 1 and scope 2 CO₂ emissions, in accordance with the relevant assurance standard for sustainability reporting, the International Standard on Assurance Engagements 3000 (Revised). [p. 71 ff.](#)

“Infineon is already one of the most sustainable semiconductor producers,” says Infineon's Chief Executive Officer, Jochen Hanebeck. “CO₂ avoidance and resource efficiency in production have been a priority for us for years, as in the setting up of our 300-millimeter thin-wafer technology. With our goal of becoming carbon-neutral, we are strengthening our efforts through electricity from renewable sources and investment in exhaust air abatement that far exceeds the industry standard.”

To achieve its targets, Infineon focuses, in particular, on avoiding direct emissions and increasing energy efficiency.

¹ In terms of the scope 1 and scope 2 emissions compared with the 2019 calendar year.

The continuing expansion of its energy efficiency program and its efforts to achieve intelligent exhaust air abatement are playing a key role here and are contributing significantly to a reduction in greenhouse gas emissions. To reduce emissions even further, the company is focusing on purchasing green electricity. To confirm this approach, Infineon joined the corporate initiative RE¹100 in the 2021 fiscal year. RE100 is a global initiative bringing together many of the world’s major businesses committed to 100 percent renewable energy. The group, which is led by the international non-profit organization Climate Group in partnership with CDP, represents more than 400 companies in a variety of economic sectors. Together, they are sending a strong message to political decision-makers and investors to accelerate the transition to a decarbonized economy.

In the future, and to a lesser extent, it is also planned to offset emissions that cannot be avoided by purchasing CO₂ certificates that combine development aid and CO₂ avoidance.

Already by the end of the 2023 fiscal year, our scope 1 and scope 2 emissions were 56.8 percent below the emissions of the base year 2019. [CHART 15](#). Factors contributing to this reduction were the expansion of smart abatement concepts and the implementation of energy efficiency programs as well as the switch to green electricity in Europe and North America and at our largest sites in Malaysia. Our decarbonization program is thus being implemented successfully.

CHART 15 CO₂ targets and status

1 Calendar year

Efficient energy management

At Infineon, energy is used mainly in the form of electricity. Primary energy sources such as oil and gas play only a minor part.

Within our manufacturing sites, the frontend sites consume most of the energy since the physical conditions for production are particularly demanding there. Thus, for example, an additional amount of energy is needed to establish the highly stable climatic conditions in the cleanrooms. In comparison, the backend sites have lower energy consumption due to the nature of their processes. Research and development sites and office locations have the lowest energy demand.

In the 2023 fiscal year, Infineon consumed around 2,601 gigawatt hours of energy worldwide. Consumption by material energy source is shown in the following table and in [CHART 16](#) on the next page.

Energy consumption (direct/indirect)

in gigawatt hours

Direct energy (scope 1) renewable	0.89
Firewood	0.89
Direct energy (scope 1) non-renewable	252.36
Natural gas	224.29
Liquid gas	1.16
Petrol	0.01
Petrol (cars)	3.09
Diesel	1.52
Diesel (cars)	17.45
Fuel oil	4.84
Indirect energy (scope 2)	2,347.73
Electricity	2,253.66
Own energy photovoltaics	0.44
District heating	93.30
Electricity (cars)	0.33
Total	2,600.98

1 RE: Renewable electricity.

Already in the 2021 fiscal year, Infineon switched to purchasing green electricity for its sites in Europe and, in the 2022 fiscal year, the North American sites followed suit. In the 2023 calendar year, our sites in Kulim (Malaysia) and Melaka (Malaysia) switched to green electricity. This is another milestone for the company, given its aim to switch all its production sites to 100 percent electricity from renewable sources by 2025. [CHART 17](#) shows the percentage of Infineon's total electricity consumption that relates to green electricity. At the end of the reporting period, this figure was 82 percent.

Infineon is endeavoring to minimize its energy consumption. For years, it has maintained special energy teams at its sites who are responsible for the optimization and continuous evaluation of our energy efficiency. At our production sites in Dresden (Germany), Regensburg (Germany) and Villach (Austria), significant amounts of heat are already being generated from integrated energy recycling via the recovery of exhaust heat, thereby greatly reducing the demand for energy to produce heating power. At our main manufacturing sites, we have implemented the methodology of the energy management system standard ISO 50001 in accordance with local requirements. The ongoing transition to the latest 300-millimeter technology and the promotion of Industry 4.0 are helping to increase efficiency.

In the 2023 fiscal year, energy consumption per unit of revenue was 0.16 kilowatt hours per euro. Figures from previous fiscal years are also shown in [CHART 18](#) as a comparison.

Greenhouse gas emissions

At an early stage, Infineon started developing strategies to reduce energy consumption as well as the amount of material used to the minimum technically necessary, thereby limiting CO₂ emissions. Greenhouse gas emissions are classified into scope 1, 2 and 3. The classification of direct and indirect emissions into scope 1, 2 and 3 is performed as set out in the Greenhouse Gas (GHG) Protocol. The calculation of CO₂ emissions is based on the ISO 14000 family of standards. These are set out in Publicly Available Specification (PAS) 2050 issued by the British Standards Institution to determine the ecobalance specific to products and in the Principles of the GHG Protocol to prepare an ecobalance (relevance, completeness, consistency, transparency and accuracy).

CHART 16 Energy consumption

rounded, in gigawatt hours

CHART 17 Green electricity as a percentage of total electricity consumption

CHART 18 Energy consumption per unit of revenue

in kilowatt hours per €

Scope 1 emissions

The semiconductor industry uses greenhouse gases in wafer-etching processes for structuring wafers as well as for cleaning production equipment. This includes perfluorinated compounds (PFC), namely perfluorinated and polyfluorinated carbon compounds, sulfur hexafluoride (SF₆) and nitrogen trifluoride (NF₃). These greenhouse gases cannot be replaced by another class of substances and account for 80.7 percent of scope 1 emissions. The increasing level of product complexity has led to rising demand for these gases. Where possible and appropriate, we counter this trend by continually optimizing our processes through more efficient production methods and through smart abatement concepts. The use of alternative gases with higher utilization rates and lower global warming potential also helps minimize the increase in emissions wherever possible. Our voluntary investment in PFC abatement enables us to avoid around two-thirds of our potential direct scope 1 emissions, which corresponds to avoiding around 692,060 tons of CO₂ equivalents per year.

As a result of the installation of additional PFC abatement systems brought into operation in the 2023 fiscal year, we were able to achieve a further reduction of 24,101 tons of CO₂ equivalents. We are therefore confident that we will be able to meet our target of saving a total of 50,000 tons of CO₂ equivalents in emissions by the end of the 2024 fiscal year.

In the 2023 calendar year, the World Semiconductor Council (WSC) set itself a voluntary target of reducing PFC emissions by 85 percent by the 2030 calendar year. The reduction rate is calculated from the difference between potential emissions arising from the production process with no PFC abatement and emissions after the application of PFC abatement systems. Already by the end of the 2023 fiscal year, Infineon has achieved a reduction in potential PFC emissions of more than 82 percent.

Our continuous improvement in the avoidance of PFC emissions can also be seen from the normalization of emissions relative to revenue generated. [CHART 19](#)

In addition to our PFC reporting, we calculate emissions for other relevant substances used at our main manufacturing sites on an annual basis. In the 2023 fiscal year,

4.79 tons of sulfur oxides (SO_x), 84.89 tons of nitrogen oxides (NO_x), 35.24 tons of carbon monoxide (CO), 641.32 tons of volatile organic compounds (VOC), and 17.34 tons of particulate matter were emitted.

Our scope 1 emissions in the 2023 fiscal year totaled 246,126 tons of CO₂ equivalents.

Scope 2 emissions

The Scope 2 Guidance¹ issued by the World Resources Institute stipulates that companies must calculate and disclose two figures for their scope 2 emissions: using market-based accounting to calculate a provider-specific emission factor and using location-based accounting derived from the regional or national grid average. By applying the provider-specific emission factors of the energy sources used (market-based accounting), our scope 2 emissions totaled 254,335 tons of CO₂ equivalents in the reporting period². This approach was selected in order to illustrate the implementation achieved so far in terms of regenerative energy supply.

We have also performed and will continue to perform regular reviews at our sites to identify potential in our own electricity supply. At our frontend site in Dresden (Germany), for example, we have been operating a highly efficient cogeneration unit for some years now. The potential for our own green electricity production on our sites is limited due to the topology of the buildings and other factors and is in the lower single-digit percentage range with regard to our total electricity consumption.

CHART 19 PFC emissions per unit of revenue

in tons of CO₂ equivalents per million €

¹ GHG Protocol Scope 2 Guidance (2015).

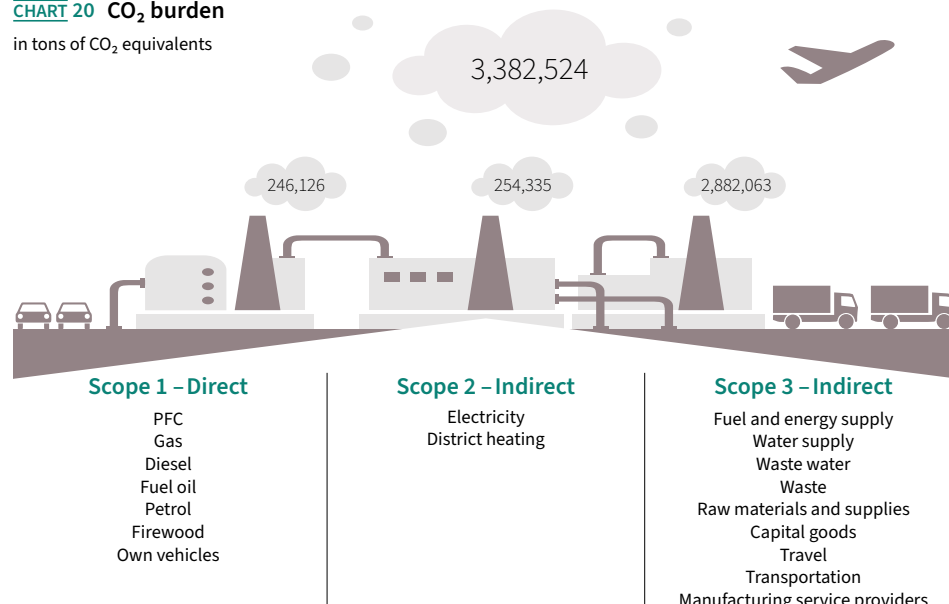

² Based on the regional or national grid average (location-based accounting), our scope 2 emissions are 952,640 tons of CO₂ equivalents.

Scope 3 emissions

Scope 3 emissions include, for example, emissions generated for the provision and disposal of all raw materials and supplies as well as other utilities, operational materials and other process media, goods transportation, travel, and energy supply activities (for example, transmission losses) and manufacturing service providers. Scope 3 emissions totaled 2,882,063 tons of CO₂ equivalents. This figure is more than 30 percent higher than in the previous year. The significant rise is due to an increase in the purchasing volume of more than 20 percent and better availability of supplier scope 3 data and thus greater coverage of the upstream supply chain. At 89 percent, supplier-related emissions comprise by far the largest proportion of scope 3 emissions. Of the supplier-related emissions, around 1.1 million tons of CO₂ equivalents relates to direct suppliers and around 1.5 million tons of CO₂ equivalents to the upstream supply chain. The following emissions have been included in the calculation of the Infineon carbon footprint:¹

CHART 20 CO₂ burden

in tons of CO₂ equivalents

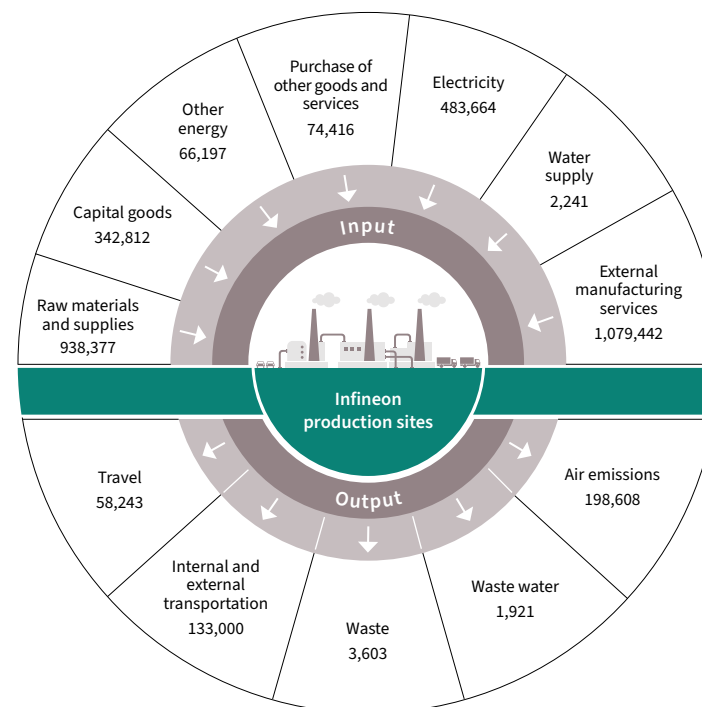

The Infineon environmental footprint in the 2023 fiscal year was around 3.4 million tons of CO₂ equivalents. [CHART 20](#)

[CHART 21](#) illustrates emissions by origin. The input streams show emissions generated, for example, in the course of supplying materials. The output streams show emissions that were generated directly (during production) and through internal and external transportation.

CHART 21 Allocation input and output of emissions by origin

in tons of CO₂ equivalents

¹ Additional information about water supply, waste water and waste is provided in “Water management” and “Waste management” in the chapter “Environmental sustainability and climate protection”.

Water management

Infineon's water balance for the 2023 fiscal year is shown in schematic form in [CHART 22](#).

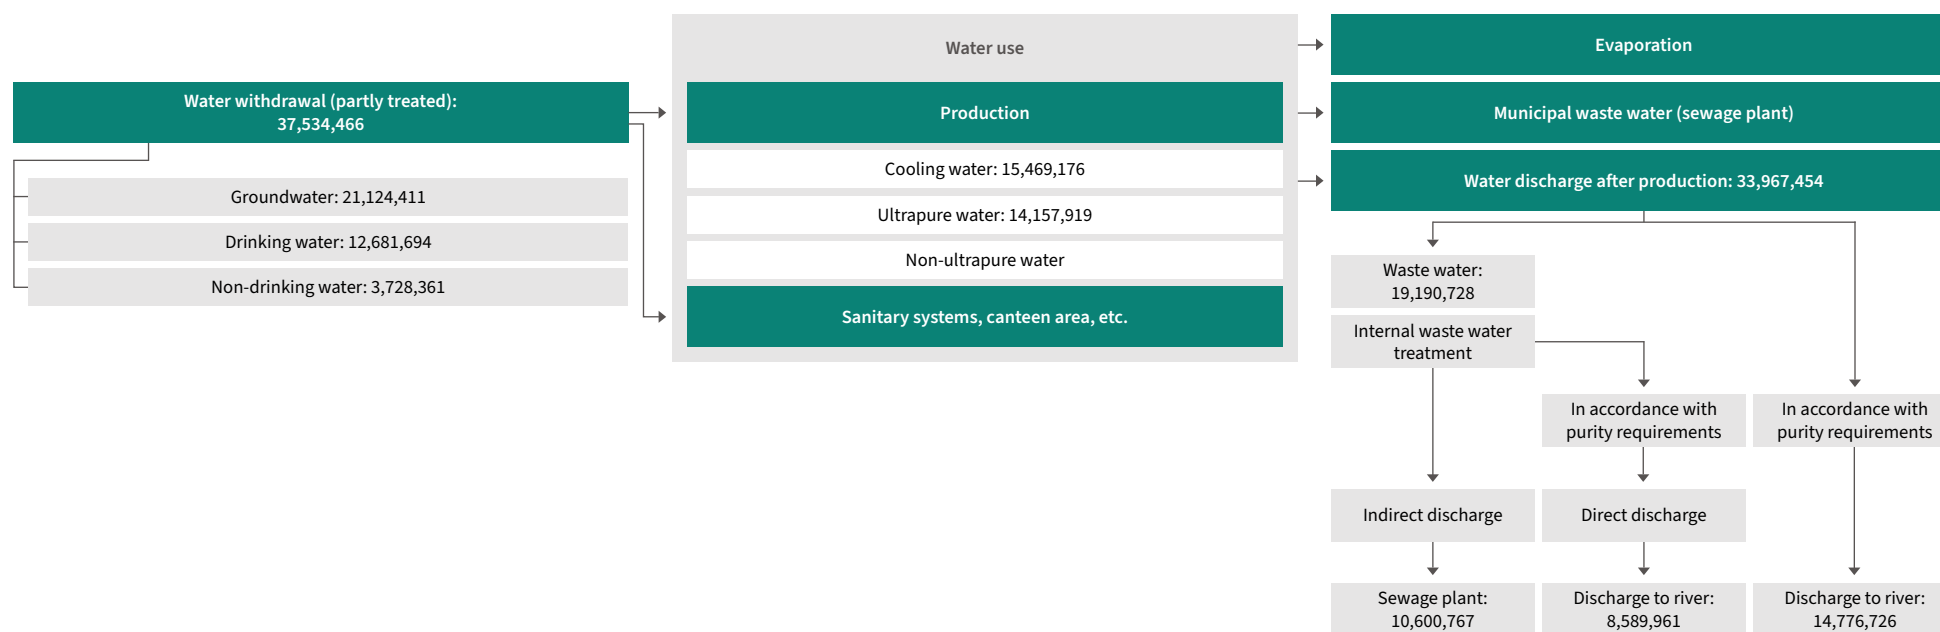

Water is used at our manufacturing sites, for example, to cool equipment or to generate ultrapure water. A significant share of our water withdrawal, which is used as cooling water, is returned in at least the same degree of purity. If the water we

withdraw does not meet the applicable purity standards, it is subject to further treatment.

Part of the withdrawn water can be reused after its initial use. During the reporting period, 2,681,991 cubic meters (18.94 percent) of ultrapure water and 2,901,085 cubic meters (15.12 percent) of production waste water were reused.

CHART 22 Water balance

in cubic meters

Infineon withdrew 37,534,466 cubic meters of water during the reporting year. Infineon sources water either from its own groundwater wells or from local providers, who supply both drinking and non-drinking water of lesser quality than drinking water. Our water sources are shown in [CHART 23](#).

After water has exited the production area, it is either directly or indirectly discharged, depending on its level of purity, the technical conditions and official regulations. The percentage of water discharged is shown in [CHART 24](#).

In accordance with the GRI definition, water consumption in the 2023 fiscal year per unit of revenue was around 0.22 liters per euro. [CHART 25](#) also shows the figures for the past few fiscal years for comparison purposes.

Based on the assessment of the potential risks of water stress we conducted using the Aqueduct Water Risk Atlas developed by the World Resources Institute (with reference to Aqueduct 3.0 data in the 2021 fiscal year), we were able to identify areas with a high or extremely high risk of water stress. Two of our sites are located in such areas: Mesa (Arizona, USA) and Tijuana (Mexico). The water withdrawal at these two sites comprises 1.20 percent of our total water withdrawal. These sites use only water provided by local suppliers. To reduce the demand for fresh water, both sites implement effective water recycling measures using reverse osmosis systems. The water discharge after production (for instance, into municipal sewage plants) for these two sites is 0.77 percent of the total water discharge.

We used the same method of assessment to determine potential future scenarios, with the result that by the end of the 2030 calendar year, other sites might find themselves in areas with water scarcity. In this context, we plan to develop measures within the IMPRES framework in accordance with local circumstances, such as consuming water more efficiently by using it multiple times in the process cycle.

CHART 23 Water withdrawal

rounded, in thousand cubic meters

CHART 24 Water discharges

CHART 25 Water consumption per unit of revenue

in liters per €

To ensure and continue to improve sustainable water consumption, we promote the exchange of knowledge between sites. In the 2023 fiscal year, as part of our NLoS¹ activities, we therefore set up a working group for knowledge transfer between the main sites offering significant water saving potential. We are planning to implement projects and measures in the 2024 fiscal year with an annual recycling potential of 6 million cubic meters of water.

In addition, commitment and communication with our stakeholders about sustainable water use are a high priority for us. By participating in CDP Water Disclosure, we also inform our stakeholders about how we handle water and about the associated risks and opportunities.

Waste management

The manufacturing process for semiconductors requires a large number of chemicals and other production materials. Waste resulting from our own manufacturing facilities is treated externally. It comprises mainly chemicals, sludge and municipal solid waste.

CHART 26 Waste generation

Our sustainable waste management is based on the classification and separation of waste and the use of safe treatment methods in accordance with local legal regulations. In the 2023 fiscal year, the total amount of waste generated was 58,454 tons, with 26,623 tons classified as non-hazardous and 31,831 tons classified as hazardous. CHART 26 In addition, 41,001 tons of the total waste generated was diverted from disposal, and 17,453 tons of the total was directed to disposal.

Besides statutory requirements, it is fluctuating production levels that have the greatest impact on the amount of waste generated and the treatment methods used. Nowadays, there are many technically viable and cost-effective processes for the treatment of waste. Infineon favors waste recycling over waste disposal. Consequently, waste is recycled or even reused rather than disposed of wherever possible. In the 2023 fiscal year, Infineon was able to send 69.50 percent of the non-hazardous waste and 70.68 percent of the hazardous waste for reuse or recycling, resulting in an overall recycling rate of 70.14 percent. The various waste treatment methods can be seen in the following tables.

Waste diverted from disposal

in tons

Hazardous waste	
Recycling	21,014
Preparation for reuse	1,484
Total	22,498
Non-hazardous waste	
Recycling	18,503
Preparation for reuse	0
Total	18,503

¹ NLoS: Next Level of Sustainability.

Waste directed to disposal

in tons

Hazardous waste	
Incineration with energy recovery	2,656
Incineration without energy recovery	794
Landfill	214
Other disposal operations	5,669
Total	9,333
Non-hazardous waste	
Incineration with energy recovery	2,652
Incineration without energy recovery	295
Landfill	5,094
Other disposal operations	79
Total	8,120

In the 2023 fiscal year, the total waste generated per unit of revenue was 3.58 grams per euro. [CHART 27](#) also shows the figures for the past few fiscal years for comparison purposes.

The data relating to the waste generated by our operations come primarily from invoices provided by the waste management contractors. These data are recorded, collated and monitored in our central electronic database. As part of our IMPRES management system, we perform regular reviews of external waste management contractors to ensure they comply with in-house and legal regulations and are authorized to handle relevant waste categories.

Along the lines of our approach to optimizing our water consumption and as part of our NLoS activities, we have also set up a working group to look at dealing with the generation of waste. This working group will share knowledge between the main sites that offer significant waste-saving potential.

Of course, the main aspects of our sustainable waste management are to avoid waste and to preserve the value of the resources we use by applying the principles of the circular economy. In its manufacturing, Infineon also requires solvents, which can be purified after use by distillation in such a way that they can then be reused to a significant extent as solvents, if this makes technical and economic sense. On the one hand, this reduces the purchase of new goods, and on the other hand, it reduces the waste generated. In the 2023 fiscal year, 228 tons of the solvent propylene glycol methyl ether acetate (PGMEA) was recovered externally by distillation of waste containing PGMEA and was reused in manufacturing.

CHART 27 Waste generation per unit of revenue

in grams per €

Contribution through sustainable products

Ecologically positive carbon footprint: During their use-phase, Infineon products enable CO₂ emission savings of around 117 million tons of CO₂ equivalents.

TARGETS

p. 55 ff.

Material topics

- › Long-term viability of core business
- › Responsible manufacturing
- › Contribution through sustainable products

Infineon's climate strategy is based on two pillars. In addition to continuing to reduce its own emissions, Infineon actively contributes to climate protection through its innovative products and solutions. Infineon's products are essential components of the mobility and energy transition. We feel responsible in equal measure for our company and for reducing our footprint. Driving forward digitalization will help optimize our resource efficiency.

Key to greater sustainability and solving climate-related challenges are new technologies that achieve more using fewer resources and save emissions at the same time. "Making more out of less" is the approach Infineon is taking to help develop better solutions for existing problems and play an active role in shaping a worthwhile future.

"To be successful in the long run, business excellence has to go hand in hand with strong environmental and social performance. With its innovative solutions, Infineon helps to make more out of less and thus actively contributes to addressing global challenges like climate change," says Dr. Sven Schneider, Chief Financial Officer of Infineon.

We conduct regular analyses of current trends as part of our definition of new products in order to identify sustainable business models. Further information can be found in "The segments" in the chapter "Business model" in the Annual Report 2023. [p. 24 ff. of the Annual Report 2023](#)

Semiconductors from Infineon help generate electricity from renewable energy sources. They also offer increased efficiency at all stages of the energy conversion chain: in generation, transmission, storage, and in particular, in the use of electricity. Semiconductors form the basis for the intelligent and efficient use of energy: in industrial applications, power supplies for computers and consumer electronics, as well as in electric vehicles.

Products and solutions from Infineon make end products more energy-efficient during their lifetime and thus make an essential contribution to improving the environmental footprint. In industrial applications such as drives or motor control units, for example, products from Infineon reduce power losses, which results in greater operational efficiency. Semiconductors also play a key role in the success of electromobility. In particular, they allow the electricity produced by the battery to be converted as efficiently as possible into motion.

Among other things, Infineon supplies the key components for the inverter, which plays a decisive role in controlling the drive in electric cars. Our power semiconductors also enable the production of energy from renewable sources using wind power turbines and photovoltaic systems. Thus, Infineon is making a significant contribution to decarbonization in the area of energy supply and in end applications.

The Infineon carbon footprint

When calculating a carbon footprint, complex processes and a variety of influencing factors need to be considered. Therefore, carbon footprint calculations are subject to certain estimates. We have continued to optimize our approach in order to improve the accuracy of such estimates.

In calculating the Infineon carbon footprint, we have considered the entire manufacturing process in accordance with the GHG Protocol, including all the utilities (raw materials and supplies), as well as internal and external logistics, including final distribution to customers. The results of the Infineon carbon footprint calculation are reported to specifically designated management representatives on a regular basis. In various areas of application (automotive electronics, industrial drives, photovoltaics as well as wind energy), our products can achieve CO₂ savings during their lifetime of around 117 million tons of CO₂ equivalents. Compared with the European electricity mix, this is around 12.5 percent of the annual net electricity production of the European Union.

Thus, with its products and innovations in combination with efficient production, Infineon achieved an environmental net benefit of more than 113 million tons of CO₂ equivalents. [CHART 28](#)

CHART 28 Infineon carbon footprint

¹ This figure takes into account manufacturing, transportation, own vehicles, travel, supplier-specific emissions, water/waste water, direct emissions, energy consumption, waste etc. as well as direct and indirect energy-related emissions by manufacturing service providers. It is based on data collected internally and publicly available conversion factors and relates to the 2023 fiscal year.

² This figure is based on internally established criteria, which are described in the explanatory notes. The figure relates to the 2022 calendar year and takes into account the following application areas: automotive electronics, industrial drives, photovoltaics as well as wind energy. CO₂ savings are calculated based on the potential savings generated by technologies in which semiconductors are used. The CO₂ savings are allocated based on Infineon's market share, semiconductor share and the lifetime of the technologies concerned, based on internal and external experts' estimations. Despite the fact that carbon footprint calculations are subject to imprecision due to the complex issues involved, the results are nevertheless clear.

Our product example: Greater efficiency and power density with the resonant flyback converter controller XDP™ in combination with CoolGaN™ IPS in the design of chargers

The increasing number of mobile devices, laptops and battery-powered devices has created the need for greater charging capacity and fast-charge functions. This trend presents a challenge to engineers, as they constantly need to achieve higher levels of performance in smaller form factors, while at the same time meeting the requirements regarding thermal output. To satisfy the related design requirements, Infineon combines the resonant flyback converter XDP™ Digital Power Controller XDPS2201 with the CoolGaN™ Integrated Power Stage (IPS) 600 V (IGI60F1414A1L). This makes it possible to produce highly-efficient chargers and adapters with high power density.

Our customer Anker has decided on Infineon's next-generation resonant flyback converter controller and CoolGaN™ IPS for fast-charging devices over 100 watts, enabling it to achieve market-leading power density. As a result, this new charging device is able to reach superb efficiency of over 95 percent at system level. In comparison with other charging solutions, this architecture reduces energy loss by 21 percent. This is the first time that Infineon's resonant flyback converter controller and CoolGaN™ IPS components have been combined and deployed commercially in the consumer electronics market.

Compliance with legal and customer-specific requirements

The processes involved in manufacturing semiconductors are complex and require a wide variety of special chemicals and materials. At Infineon, we responsibly manage the handling of hazardous substances to safeguard human health and the environment.

Our products meet all the requirements set out in the European chemicals legislation known as REACH [Regulation (EC) 1907/2006 Registration, Evaluation, Authorisation and Restriction of Chemicals].

The use of certain substances defined by the European legislature as hazardous in end products is regulated by two key European directives: firstly, Directive 2000/53/EC on end-of-life vehicles (ELV Directive) and, secondly, Directive 2011/65/EU on the restriction of the use of certain hazardous substances in electrical and electronic equipment (RoHS Directive) in conjunction with Delegated Directive 2015/863/EU.

None of Infineon's products fall within the scope of these directives. However, our customers expect our products to meet legal requirements in their applications. Infineon products comply with the substance restrictions in the aforementioned legal regulations and thus meet customer requirements.

Furthermore, we provide our customers with information on the chemical composition of the materials contained in our products.

Infineon constantly works to develop and implement alternatives for certain materials, such as lead. Thus, for example, as part of the DA5 (DA5: Die Attach, five cooperation partners) consortium, we are working to find lead-free alternatives for high melting temperature solders, which are necessary for specific applications because of their properties.

EU Taxonomy

Infineon's products and solutions enable decarbonization and create added value for society.

TARGETS

p. 55 ff.

Material topics

- › Long-term viability of core business
- › Contribution through sustainable products
- › Responsible manufacturing

As part of the European Green Deal, which set a target for the EU to become climate-neutral by 2050, the European Commission resolved in its Sustainable Finance action plan to set up a framework to facilitate sustainable investment, known as the EU Taxonomy. The Taxonomy Regulation (2020/852), to be applied by certain companies as from 1 January 2022, sets out a standardized classification system for environmentally sustainable economic activities. To qualify as environmentally sustainable, an activity must make a substantial contribution to one of the six environmental objectives:

1. Climate change mitigation	4. Transition to a circular economy
2. Climate change adaptation	5. Pollution prevention and control
3. Sustainable use and protection of water and marine resources	6. Protection and restoration of biodiversity and ecosystems

The classification system distinguishes between Taxonomy eligibility and Taxonomy alignment. Taxonomy-eligible activities are, in principle, capable of making a substantial contribution to one of the environmental objectives set out above. Taxonomy-aligned economic activities demonstrably make a substantial contribution to one of the environmental objectives and do no significant harm to any of the other five environmental objectives. Proof of Taxonomy alignment must be furnished through a multi-stage review process that involves complying with technical screening criteria as well as with minimum safeguards.

Whereas the EU Taxonomy Regulation was published in June 2020, the Delegated Act on environmental objectives 1 ("Climate change mitigation") and 2 ("Climate change adaptation") and the legislation relating to reporting obligations were published in the 2021 calendar year. To specify and clarify issues regarding implementation, the EU Commission also made FAQ¹ documents available. The EU Taxonomy stipulates that companies under the obligation to report shall disclose the Taxonomy-eligible proportion of turnover, capital expenditure and operating expenditure for environmental objectives 1 and 2 in their annual reports and/or sustainability reports published as from January 2022. It also stipulates that, as from the 2023 calendar year, these publications should include disclosures of Taxonomy alignment. In June 2023, the EU Commission approved the Delegated Act on environmental objectives 3 to 6 and amendments to the disclosure obligations and adjustments to environmental objectives 1 to 2 in respect of the inclusion of additional categories and amendments to the screening criteria.

The Environmental Delegated Act on environmental objectives 3 to 6 contains the technical screening criteria for a number of economic activities that make a substantial contribution to one or several of the additional four non-climate-related environmental objectives. The amendments to environmental objectives 1 to 2 (Climate Delegated Act) relate, inter alia, to the inclusion of additional economic activities in the catalog and amendments to the technical screening criteria of some existing economic activities, as well as amendments in Appendix C on the use and availability of certain chemicals. The amendments to the disclosure obligations (Disclosure Delegated Act) relate, inter alia, to the design of the reporting form.

¹ FAQ: Frequently Asked Questions.

In principle, companies must report on their Taxonomy eligibility with regard to the newly introduced economic activities in respect of environmental objectives 3 to 6 as from 1 January 2024. The amendments to the Disclosure Delegated Act and the amendments to existing economic activities in respect of environmental objectives 1 and 2 must also be implemented as from 1 January 2024.

We consider the reporting on the Taxonomy as an integral part of our communication. The EU Taxonomy Regulation and the related Delegated Acts contain formulations and terms that are still subject to significant uncertainties with regard to their interpretation and in respect of which clarifications have not yet been published in every case. For this reason, in our view, in its current form it is not an adequate tool to demonstrate how Infineon creates added value and how our products and solutions can contribute to overcoming societal challenges such as climate change. “Innovation is key and semiconductors are the critical building blocks to drive decarbonization and the digitalization of our world. At Infineon, we are enabling a climate-neutral economy, and we are connecting the real world with the digital world,” says Jochen Hanebeck, Chief Executive Officer of Infineon. We have described the contributions made by our products and solutions to climate change mitigation in the chapter “Contribution through sustainable products”. [p. 37 ff.](#)

The Infineon approach to classification

To meet the reporting obligation set out in the EU Taxonomy Regulation, a cross-functional project team was established. All Infineon products and solutions were assessed in the classification. First of all, as part of the determination of Taxonomy eligibility, the portfolio was divided into appropriate groups crossing over the segments. Criteria here included the fact that the attribute contained identical or similar characteristics of the products/solutions and was clearly able to be assigned to a particular group based on relevant parameters. The cross-functional project team could then make its assessment of Taxonomy eligibility.

Infineon’s business activities can currently be classified as economic activities under the heading “3. Manufacturing”, as described in the Delegated Act on the two first environmental objectives. Our products and solutions, due to their many different areas of application, are used, for example, as parts or components in the area of

electromobility and in renewable energy and home appliances. An example from our Taxonomy-eligible portfolio is inverters for the conversion of direct current into alternating current in photovoltaic systems.

To avoid double counting, the allocation was made to an enabling activity only if a Taxonomy-eligible economic activity had not already been included in another category.

The assessment of Taxonomy alignment is a three-step process in which a Taxonomy-eligible economic activity is evaluated to establish whether (a) it actually and demonstrably makes a substantial contribution to one of the environmental objectives, whether (b) it causes no significant harm to the other five environmental objectives and whether (c) it meets minimum social safeguards. Criteria (a) and (b) are also summarized as technical screening criteria.

(a) How to meet the substantial contribution requirement in respect of one of the six environmental objectives is described and defined in the relevant category. For disclosure in the 2023 fiscal year, Taxonomy alignment must be shown for the environmental objectives 1. “Climate change mitigation” and 2. “Climate change adaptation”. Infineon has no Taxonomy-eligible economic activities relating to environmental objective 2. The assessment of the substantial contribution is in principle conducted taking account of Infineon product groups (such as “Components for solar and wind power”) and documented accordingly using standardized test steps. As a result of legal uncertainties in the interpretation of Appendix C regarding environmental objective 5 “Pollution prevention and control”, the relevant Taxonomy-eligible economic activities for this reporting year were classified as Taxonomy-non-aligned. This assessment may change in the future when interpretations have been clarified.

As Infineon products and solutions are highly heterogeneous and its sales structure is therefore complex, the category allocation is conducted in different ways in the various segments. Useful attributes here include customers that can be clearly assigned or product features (such as voltage range and main functionality). This means that a product group could definitely be allocated to several applications.

(b) The second step in the technical screening criteria process is to ensure that the economic activity causes no significant harm to the other five environmental objectives.

Infineon meets the requirements set out in this second test step in respect of environmental objectives 2, 3, 4 and 6. Detailed particulars are set out below.

Environmental objective 2: Climate change adaptation

Physical climate risks have been determined at site level in the course of a robust climate risk assessment based on the risks set out in the table in Appendix A, Section II of Annex I. The Representative Concentration Pathways 2.6 and 8.5 and a time horizon to 2050 were used here, based on various data sources. As a result of this assessment, effective adaptive solutions will be applied wherever potential risks exist.

Environmental objective 3: Sustainable use and protection of water and marine resources

In accordance with our environmental policy, potential impacts on the environment are investigated as early as possible and are taken into account when products and processes are being developed. For this purpose, Infineon has established an integrated management system known as IMPRES (Infineon Integrated Management Program for Environment, Energy, Safety and Health). Consequently, data is collected which is also used to maintain water quality and prevent water scarcity, and associated potential risks are analyzed at production site level. Additional information about this topic can be found in the section “Water management” in the chapter “Environmental sustainability and climate protection”. [p. 33 ff.](#)

Environmental objective 4: Transition to a circular economy

As part of the assessment of environmental objective 4, it is necessary to check whether the economic activity supports the availability or, where possible, the application of certain processes. So, for example, in the case of waste management, recycling should take priority over disposal. The result of the assessment was that our economic activities cause no significant harm to environmental objective 4. Additional information about this topic can be found, for example, in the section “Waste management” in the chapter “Environmental sustainability and climate protection”. [p. 35 f.](#)

Environmental objective 6: Protection and restoration of biodiversity and ecosystems

To protect and restore biodiversity and ecosystems, an analysis was conducted in the form of an environmental impact assessment at site level to identify risks and determine corrective measures. It was established here that our products and solutions cause no significant harm.

(c) In assessing whether minimum safeguards are met, comprising the topics “Human rights”, “Corruption and bribery”, “Tax” and “Fair competition”, we align ourselves with the recommendations from the “Final Report on Minimum Safeguards”, which was published in October 2022 by the European Platform on Sustainable Finance. The assessment of these aspects takes place at Group level. When looking at the topics of human rights and corruption and bribery, it is the value chain that is considered, while the topics of tax and fair competition only involve looking at Infineon itself.

In conclusion, Infineon meets the requirements set out in the minimum safeguards. Detailed information about our efforts in the relevant areas can be found in the chapters “Business ethics”, “Human rights”, “Our responsibility along the supply chain” and “Our contribution to the UN Global Compact principles” in this report and in the chapter “Corporate governance” in the Annual Report 2023. [p. 14 ff., p. 17 f., p. 47 ff. and p. 60 f. and p. 82 ff. of the Annual Report 2023](#)

When generating the reporting parameters, we concentrated exclusively on revenue-generating Taxonomy-eligible economic activities in Annex I to the EU Commission Delegated Regulation (EU) 2021/2139. In the 2023 fiscal year, the figures relating to our Taxonomy-eligible economic activities were as follows: revenue of €9,353 million (57 percent), capital expenditure of €2,174 million (70 percent) and operating expenditure of €1,283 million (51 percent). [p. 44 ff.](#)

Revenue according to the EU Taxonomy is the revenue disclosed in the consolidated statement of profit or loss. To determine the proportion of Taxonomy-eligible revenue, the Taxonomy-eligible revenue is considered in relation to total Group revenue. Additional information on revenue and on the analyses of revenue by segment, product group and region is included in the Annual Report 2023 in the “Notes to the Consolidated Financial Statements” and in the “Segment reporting” section of the Notes. [p. 108 ff. and p. 156 ff. of the Annual Report 2023](#)

Capital expenditure according to the EU Taxonomy comprises additions to intangible assets (especially capitalized development costs), additions to property, plant and equipment, and right-of-use assets in accordance with IFRS¹ 16.

Operating expenditure comprises mainly costs relating to research and development, repairs and maintenance of property, plant and equipment, and short-term leases.

The Taxonomy-eligible proportions of revenue, capital expenditure and operating expenditure were calculated directly from Infineon’s financial systems if a connection with a Taxonomy-eligible activity could be established from master data held in the financial systems (such as revenue or significant elements of research and development expenses). If no direct relationship to a Taxonomy-eligible activity was apparent in the financial systems and financial planning processes, the Taxonomy-eligible proportion of the capital expenditure and operating expenditure was calculated using a revenue-based allocation key.

The following tables provide a summary of the relevant parameters Infineon is required to report in respect of the EU Taxonomy for the 2023 fiscal year.

¹ IFRS: International Financial Reporting Standards are international accounting standards that apply to companies and are issued by the International Accounting Standards Board (IASB).

Revenue

Economic activities	Absolute turnover	Proportion of turnover	Substantial contribution criteria						DNSH criteria ("Do No Significant Harm")						Minimum safeguards	Taxonomy-aligned proportion of turnover 2023	Taxonomy-aligned proportion of turnover 2022	Category (enabling activity)	Category (transitional activity)

Our responsibility along the supply chain¹

Integrated supplier management for us means working together with suppliers in an environmentally and socially responsible way.

TARGETS

p. 56 ff.

Material topics

- › Contribution through sustainable products
- › Responsible manufacturing

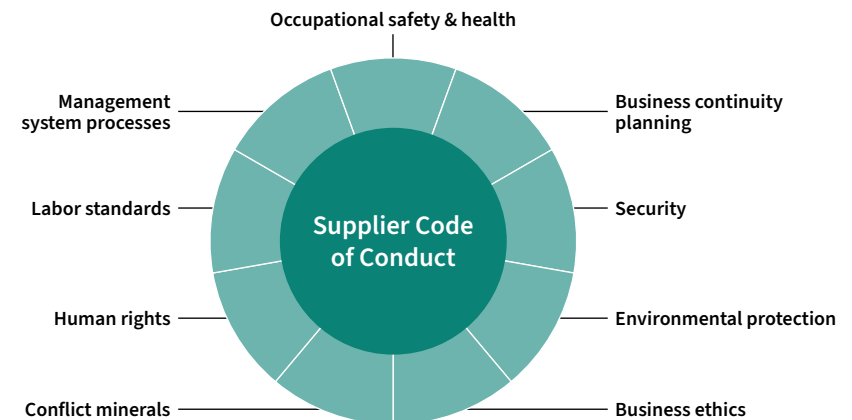

Sustainability as an integral part of supplier management

A long-term partnership between Infineon and its suppliers is a core element of our corporate philosophy. Through integrated management of our supplier relationships, we aim to act in an environmentally and socially responsible way in our own field of operations and beyond.

Our Supplier Code of Conduct is based on internationally recognized guidelines, such as the UN Global Compact principles, the standards of the Responsible Business Alliance (RBA) and the fundamental principles of the International Labour Organization as well as our Business Conduct Guidelines. With the additions made to our Supplier Code of Conduct in the 2023 fiscal year, we ensure that the current versions of guidelines are reflected therein. The requirements described in our Supplier Code of Conduct cover the topics shown in [CHART 29](#). By anchoring sustainability requirements and monitoring measures in the procurement process, we increase the effectiveness of our supplier management, reduce possible risks, create transparency along the supply chain and initiate improvement processes at suppliers. Our main suppliers are also contractually obliged to uphold our environmental, occupational safety and health as well as CSR commitments. To enter into a business relationship with us, these suppliers are required to commit to our basic principles.

As part of this long-term partnership, all our suppliers are managed centrally in a supplier management portal where data is updated as necessary.

CHART 29 Supplier Code of Conduct

¹ Following the acquisition of Syntronix Asia, the procurement processes/definitions are currently still in the harmonization phase and will apply once the harmonization phase has been completed. As a result, the information published in this chapter does not include data from Syntronix Asia.

We offer our suppliers a central portal for the registration and automated update of relevant information such as compliance, sustainability, environmental protection, occupational safety, labor standards and social standards. Additionally, this portal allows suppliers to submit updated certifications. We encourage all suppliers to be certified in accordance with international standards.

At the same time, our supplier management portal is also used to evaluate suppliers. When we select new suppliers, evaluate existing ones and make decisions regarding future supplier development, compliance with our requirements is mandatory.

More than 100 new suppliers and new subsidiaries of existing suppliers are therefore categorized every quarter according to their products and services. Depending on this categorization, the supplier receives up to ten questionnaires on various topics in the supplier management portal. The responses received are evaluated by the relevant Infineon specialist departments. The supplier is approved only following a successful evaluation. When necessary, improvement measures are jointly agreed with the supplier. This procedure supports a fast and up-to-date assessment. The annual re-evaluation of selected suppliers serves to determine whether or not corrective measures need to be initiated. In the 2023 fiscal year, more than 360 strategic suppliers, representing over 70 percent of the procurement volume, were re-evaluated with regard to the topics mentioned.

In the 2023 fiscal year, we enhanced our supply chain risk management system with regard to human rights and environmental protection, and strengthened our collaboration with platform providers IntegrityNext and RBA. In addition to the annual re-evaluation of our strategic suppliers, we conducted a risk analysis here focusing on human rights and environmental protection. A review of compliance with our requirements was conducted for more than 600 other suppliers who could present a high potential risk in the area of environmental protection and human rights as a result of their activities in certain countries or industries. Where specific risks were identified for suppliers on the basis of further information, preventive and corrective

measures were implemented. These could be in the form of a medium-term improvement plan we agree with the supplier or in the form of training. By working together with IntegrityNext and RBA, we are playing an active role in industry collaboration designed to strengthen international standards in global supply chains.

Environmental sustainability and climate protection in the supply chain

With the publication of our climate targets in the 2020 fiscal year, an initiative was launched where we work together with suppliers to drive forward environmental sustainability and climate protection in the supply chain. The main priorities of this initiative are scope 3 emissions and the circular economy. In the 2023 fiscal year, for example, at our site in Villach (Austria) and in close cooperation with partners in the supply chain, we brought a new production plant for green hydrogen into operation which will prevent transport emissions. Another example for the active transition of the supply chain to more sustainable solutions is in the area of fleet management where, as a result of the further amendment to the company car guidelines in the 2023 fiscal year, company cars with a lower carbon footprint are being promoted even more strongly, with a focus on a gradual transition to electric vehicles.

Going beyond contractually agreed environmental requirements with suppliers, supplier performance in the area of CO₂ management was a criterion in the re-evaluation of selected suppliers in the 2023 fiscal year. In addition, the communicated targets and reduction measures of our principal suppliers were analyzed, and focus dialogs were conducted with our suppliers on the topic of climate strategy. Our collaboration with our suppliers on the subject of climate protection and Infineon's climate protection strategy were also honored in the 2023 fiscal year by Infineon's inclusion in the top ranking for supplier engagement published by the non-profit organization CDP (CDP Supplier Engagement Leaderboard).

Infineon products without DRC¹ conflict minerals

The U.S. Dodd-Frank Act (Dodd-Frank Wall Street Reform and Consumer Protection Act) was adopted in 2010. It contains disclosure and reporting obligations for companies listed on stock exchanges in the USA concerning the utilization of

1 DRC: Democratic Republic of the Congo.

“conflict minerals” that originate from the DRC or its adjoining countries. The term “DRC conflict minerals” applies to tantalum, tin, gold and tungsten, inasmuch as their extraction and/or trade directly or indirectly finances or benefits armed groups in the DRC or adjoining countries. The use of the materials mentioned is essential for the functionality of our products.

Respect for human rights is a matter of course for Infineon. Avoiding conflict minerals in the supply chain means that we are contributing towards the prevention of human rights abuses. Infineon is not listed on U.S. stock exchanges and therefore not legally required to publish a report on conflict minerals. Nevertheless, as a member of the Responsible Minerals Initiative, we uphold our voluntary commitment to responsibility within the supply chain. At the same time, our comprehensive declaration on the use of conflict minerals supports those of our customers who are required to perform due diligence within their supply chains to fulfill their reporting duties in accordance with the requirements of the U.S. Securities and Exchange Commission (SEC).

Since Infineon does not source these metals directly from mines or smelters, we identify their origin in close cooperation with our direct suppliers. For this purpose, we have introduced a standardized process throughout the organization based on the OECD¹ Due Diligence Guidance for Responsible Supply Chains of Minerals from Conflict-Affected and High-Risk Areas in order to create the necessary transparency within our supply chain.

Our targets and requirements for our supply chain are set forth in the Infineon Conflict Minerals Policy and the Supplier Code of Conduct concerning the Responsible Sourcing of Conflict Minerals, which are published on our website. www.infineon.com/csr_reporting

In the 2023 fiscal year, Infineon identified 100 percent of its potential suppliers of conflict minerals and evaluated them with regard to their use of conflict minerals. Based on the full response of our suppliers and in accordance with the requirements of the

OECD guidance, we can duly state that all Infineon products are DRC conflict-free. Moreover, we request that our suppliers continue purchasing only raw materials from smelters that meet the Responsible Minerals Assurance Process requirements or those of an equivalent audit program.

Voluntary cobalt and mica (layered silicates) assessment for Infineon products

The DRC has around 50 percent of global cobalt reserves and produces the largest quantity of cobalt in the world. Serious concerns have been raised in several reports about the social and environmental impact of cobalt extraction, including child labor and unsafe working conditions in cobalt mines. As a responsible company, Infineon has therefore, as of the 2020 fiscal year, expanded its activities relating to social and environmental responsibility in the supply chain and voluntarily included cobalt in its due diligence program for the responsible procurement of minerals. We also identified all suppliers of material containing cobalt in the course of our investigation in the 2023 fiscal year and requested them to report cobalt smelters in their supply chain.

Mica is a name given to a group of minerals known as layered silicates, which are frequently used as insulation in power diodes, semiconductors and rectifiers and can contribute towards insulating semiconductors fully from their packages, dissipating heat and keeping components cool. The mica group represents 37 types of minerals with layered structures (layered silicates) that allow them to be split into thin flakes or sheets. In two major mica-producing countries, India and Madagascar, mica supply chains rely heavily on artisanal and small-scale extraction as well as manual processing. Since the 2022 fiscal year, we have conducted an annual review of our production materials for the use of mica.

To ensure transparency, we make the results of our assessment available to our customers in the form of a combined Cobalt and Mica Declaration (Extended Minerals Reporting Template).

¹ OECD: Organisation for Economic Co-operation and Development.

Corporate citizenship

Infineon is currently engaged in corporate citizenship activities in 21 countries.

TARGETS

p. 56 ff.

Material topic

› Corporate Citizenship

Infineon and its employees understand corporate citizenship as a voluntary social and societal contribution to the communities in which we operate. Infineon has defined four areas of activity in the field of corporate citizenship: Environmental Sustainability, Education for Future Generations, Local Social Needs, and Responding to Natural and Humanitarian Disasters.

These focus areas of engagement are contained in our Corporate Citizenship and Sponsoring Rule. This Rule ensures that our corporate citizenship activities are performed transparently and in line with our ethical principles. We have also appointed a citizenship representative for this topic at all our major sites. The request and approval process in the area of corporate citizenship is also defined in the Corporate Citizenship and Sponsoring Rule, which is binding worldwide. This Rule describes the opportunities for involvement and determines the role of specialist departments and the Management Board as part of the request and approval process.

Infineon supported 277 activities worldwide in the 2023 fiscal year. 17 percent of the donations were local investments in the communities with which we interact, and 83 percent were donations to charitable purposes.

Our corporate citizenship expenditure in the 2023 fiscal year is illustrated in [CHART 30](#).

CHART 30 Corporate citizenship expenditure 2023

in €

Examples of the corporate citizenship activities of Infineon in the 2023 fiscal year

Environmental Sustainability

- › Support for planting trees in Warstein to counter the massive forest dieback caused by bark beetles (Germany)
- › Support for cleaning the coast in Porto to prevent the spread of invasive plant species (Portugal)
- › Support for the Zentrum für Umwelt und Kultur e. V. (ZUK), a center for the environment and culture, to preserve the moor, an essential ecosystem for climate protection (Germany)

Education for Future Generations

- › Support for the Hackaburg 2023, a hackathon with the motto “Goes Green” (Germany)
- › Support for the Greene Scholars Program to promote higher education in STEM¹ subjects (USA)
- › Support for the Kedah STEM Fair & Expo 2023, promoting scientists and engineers of the future (Malaysia)
- › Support for the Great Engineer Camp at Jiangnan University, a platform for training students to be engineers of the future (Mainland China)

Local Social Needs

- › Donation to the St. Jude Children’s Research Hospital to support research and treatment for children with cancer (USA)
- › Donations to various food banks and soup kitchens in Warstein to support the hungry (Germany)
- › Donation to Shenzhen Futian Charity Association to support its efforts for rural revitalization (Mainland China)
- › Aid for the Banca de Bine Association to reintegrate children from challenging social backgrounds into society (Romania)

Responding to Natural and Humanitarian Disasters

- › Support for those affected by the earthquake in Syria and Turkey
- › Aid for the American Red Cross (USA)

¹ STEM: Science, Technology, Engineering and Mathematics.

Memberships and partnerships

Infineon is involved in numerous industry associations and standardization organizations, including for example:

Industry associations

- › 5G Alliance for Connected Industries and Automation (5G-ACIA)
- › 5G Automotive Association (5GAA)
- › 6G Smart Networks and Services Industry Association (6G-IA)
- › Association for Electrical, Electronic and Information Technologies (VDE)
- › Association representing the Smart Security Industry (EUROSMART)
- › Autonomous Vehicle Computing Consortium (AVCC)
- › CAR 2 CAR Communication Consortium (C2C-CC)
- › Charter of Trust
- › China Semiconductor Industry Association (CSIA)

Our sustainability targets

Targets for the 2023 fiscal year		Status	Description
Overall goals	Set ambitious climate protection and diversity goals as part of the compensation system for the Management Board for the 2023 fiscal year.	●	Climate protection and diversity goals were defined as part of the compensation system for the Management Board.
	Incorporate the main sites formerly operated by Cypress into the integrated management system IMPRES by the end of the 2023 fiscal year by obtaining external certification of the sites.	●	All the main sites formerly operated by Cypress were incorporated into our IMPRES matrix certification in the 2023 fiscal year on the basis of external audits.
Business ethics	Restructure the risk assessment process, linking it with the self-assessment process for Group companies and locations. This should ensure that all significant compliance risks are identified, evaluated and transferred into the annual compliance program.	●	The risk assessment process was expanded to include a two-stage model, whereby certain high-risk companies and sites were identified at Group level (1st stage). These high-risk companies were assessed in detail at local level (2nd stage) using structured questionnaires, and the risks identified there were transferred to the compliance program.
Human rights	Introduce a declaration of principles on human rights as part of Infineon's CSR strategy.	●	In the 2023 fiscal year, we published Infineon's Human Rights Policy. This supports our CSR framework with a focus on human rights.
	Gradually introduce training on human rights for our employees worldwide.	●	In the 2023 fiscal year, we rolled out a separate and global human rights training program. This includes topics such as an explanation of fundamental human rights, the role of companies and international organizations, and the measures Infineon is taking to respect human rights.
Human resources management	In the long term, we want the proportion of women in management positions to reach 20 percent. With the development of division-specific targets and measures, which are regularly reviewed by the relevant management groups or by the Management Board, this target should be achieved. Another measure is to increase the visibility of talented women within the Group.	①	The proportion of women in middle and senior management positions in the 2023 fiscal year was 17.1 percent. This is therefore a further step towards achieving our long-term target, as it was a slight improvement on the prior fiscal year.
	The existing global target of 80 percent overall employee satisfaction remains unchanged for the time being. The measures we are adopting to achieve this target include continuing to develop leadership skills and ensuring balanced workloads.	●	In the 2023 fiscal year, we achieved the global target we had set ourselves, with 85 percent of employees giving a positive response to the questions "Would you recommend Infineon as a great place to work?" and "How happy are you working at Infineon?" in our engagement pulse check. This survey of employees is conducted twice a year using the People Success Platform GLINT.

● Target achieved ① In progress ○ Target not yet achieved

Targets for the 2023 fiscal year		Status	Description
	Human resources management At least 90 percent of all our managers (from the Director level with five or more direct employees) will conduct a Leadership Dialog with their employees within two years. The Leadership Dialogs provide managers with structured feedback from their employees. This makes it possible for them to reflect on their own management behavior, recognize their strengths and identify potential improvements. This improves collaboration both with and within the team. The measures for achieving this target include regular monitoring of the completion of Leadership Dialogs and the training of internal or external moderators for the Leadership Dialogs.		In the course of the Leadership Dialogs, managers receive structured feedback from their employees. Currently, around 82.2 percent of managers have conducted their Leadership Dialogs in the past two years. We consider it important to ensure that these dialogs about targets continue to take place and that the percentage of dialogs conducted continues to increase. We therefore actively communicate with managers on this subject and have now also introduced an automated calendar reminder for the next Leadership Dialog. These reminder functions are currently being enhanced. We are constantly expanding and training our pool of moderators, in order to provide the best possible support for our managers.
	Protection of our employees Introduce a global digital software solution to report and process work-related accidents and commuting accidents at all the main production sites and at the corporate headquarters Campeon (Germany).		In the 2023 fiscal year, a digital software solution to report and process work-related accidents and commuting accidents was developed, so that the main production sites and the corporate headquarters Campeon will be able to provide reports on this subject at the beginning of the 2024 fiscal year.
	Environmental sustainability and climate protection Carbon neutrality Infineon has set itself the target of becoming carbon-neutral by the end of the 2030 fiscal year in terms of scope 1 and scope 2 emissions defined by the GHG Protocol. By the end of the 2025 fiscal year, emissions should already have been reduced by 70 percent compared with the 2019 ¹ calendar year.		By the end of the 2023 fiscal year, our emissions were already 56.8 percent lower than the emissions in the base year 2019. We are therefore meeting the timetable we set for achieving our climate targets.
	Energy management Implement projects and measures in the 2023 fiscal year to increase energy efficiency, giving total potential annual energy savings of 20 gigawatt hours. One of the ways this target will be achieved is by adopting site-specific measures for infrastructure and manufacturing.		In the 2023 fiscal year, we implemented measures that generated energy savings of more than 34 gigawatt hours.
	Greenhouse gas emissions Implement measures that will generate total emission savings of 50,000 tons of CO ₂ equivalents by the end of the 2024 fiscal year. ²		The implementation of the measures is progressing as planned. In the 2023 fiscal year, the installation of additional PFC abatement systems brought into operation led to a reduction of 24,101 tons of CO ₂ equivalents.

Target achieved
 In progress
 Target not yet achieved

1 In line with our carbon neutrality goal, with the 2019 calendar year as the base year, the relevant data of Cypress are included.

2 Cumulative from the 2021 fiscal year.

Targets for the 2023 fiscal year		Status	Description
	Environmental sustainability and climate protection		
	Water management		
	Due to the increasing complexity of our products, the use of water in manufacturing increases too. Regardless of this growing product complexity, our aim is to keep our specific water consumption below 8.5 liters per square centimeter manufactured wafer.	●	Our specific water consumption was around 8.1 liters per square centimeter manufactured wafer.
	Identify and evaluate the main water-saving measures of the last five fiscal years in order to continue to improve our water management and to derive quantified reduction targets.	●	We set up a group to share ideas about the main sites offering significant potential savings.
	Waste management		
	Regardless of growing product complexity, which typically requires an increase in the use of raw materials and supplies, our aim is to keep specific waste generation below 27.5 grams per square centimeter manufactured wafer. This is a long-term goal that is in accordance with our sustainability strategy.	●	Our specific waste generation was around 21.5 grams per square centimeter manufactured wafer.
	Identify and evaluate the main waste-saving measures of the last five fiscal years in order to continue to improve our waste management and to derive quantified reduction targets.	●	We set up a group to share ideas about the main sites offering significant potential savings.
	Contribution through sustainable products		
	Update the calculation of the Infineon carbon footprint, considering all the segments.	●	The Infineon carbon footprint was updated in the 2023 fiscal year and is published in this report.
	EU Taxonomy		
	Analyze the options for automated evaluation and interpretation of the information required by the EU Taxonomy.	●	The analysis was conducted, and implementation is taking place in a two-stage process for the assessment of Taxonomy eligibility and Taxonomy alignment.

● Target achieved
 ● In progress
 ○ Target not yet achieved

Targets for the 2023 fiscal year		Status	Description
Our responsibility along the supply chain	Maintain a DRC conflict-free supply chain and conduct another evaluation of the use of conflict minerals for 100 percent of the relevant suppliers.	●	In the 2023 fiscal year, an evaluation was conducted of 100 percent of suppliers of conflict minerals with regard to the origin and use of conflict minerals. The evaluation concluded once more that the Infineon supply chain is DRC conflict-free. The results of the evaluation are made available to our customers in the form of a declaration (Conflict Minerals Reporting Template).
	Conduct a due diligence assessment for 100 percent of suppliers of products containing cobalt or mica to create transparency in the supply chain regarding the origin of cobalt and mica and publish the results in the form of a combined Cobalt and Mica Declaration.	●	In the 2023 fiscal year, a due diligence assessment was conducted of 100 percent of suppliers of products containing cobalt with regard to the origin and use of products containing cobalt. In addition, our supply chain was investigated with regard to the use of mica, and the results are made available to our customers in the form of a combined cobalt and mica declaration (Extended Minerals Reporting Template).
	Implement an enhanced risk management system for human rights and environmental protection in the supply chain.	●	The planned enhancement of our risk management system for human rights and environmental protection in the supply chain was implemented. Among other things, additions were made to the Infineon Supplier Code of Conduct in the 2023 fiscal year, and the role of sustainability criteria in the supplier selection process was reinforced. A risk analysis to identify and mitigate risks relating to environmental protection and human rights throughout the supply chain was also conducted.
	Introduce training in the procurement organization to raise awareness of risks in the areas of environmental protection and human rights.	●	In addition to worldwide training on the topic of human rights, 13 hours of live training sessions were provided within the procurement organization, focusing on human rights and environmental protection. More than 78 percent of employees in procurement took advantage of this training opportunity.
	Analyze the CO ₂ reduction targets and measures of all our major suppliers. ¹	●	The CO ₂ reduction targets and measures of all our major suppliers were analyzed based on data from the CDP Supply Chain Program and additional research and discussions. The data offer a clear basis for collaboration and supplier development in the area of climate protection.
Corporate citizenship			
	Implement best practice sharing sessions and training with the corporate citizenship representatives to follow a proposal for the distribution of donations by focus areas as part of our corporate citizenship strategy in the 2023 fiscal year.	●	In the 2023 fiscal year, best practice sharing sessions and training took place.

● Target achieved ● In progress ○ Target not yet achieved

¹ Major suppliers are here taken to mean suppliers who together account for more than 50 percent of the scope 3 emissions.

Targets for the 2024 fiscal year

	Overall goals	<p>Set climate protection and diversity goals as part of the compensation system for the Management Board for the 2024 fiscal year.</p> <p>Introduce a new digital platform for non-financial reporting; increase resilience and reduce the manual workload for data transfer by 50 percent.</p>
	Business ethics	<p>Restructure the risk assessment process, linking it with the self-assessment process for Group companies and locations. This should ensure that all significant compliance risks are identified, evaluated and transferred into the annual compliance program.</p>
	Human rights	<p>Conduct a risk analysis of human rights using self-assessments or audits at 100 percent of IMPRES certified sites.</p>
	Human resources management	<p>Infineon has set itself the long-term goal of increasing the proportion of women in management positions to 20 percent. With the development of division-specific targets and measures, which are regularly reviewed by the relevant management groups or by the Management Board, this target should be achieved. Another measure is to increase the visibility of talented women within the Group.</p> <p>Continue to reach the existing global target of 80 percent overall employee satisfaction. The measures we are adopting to achieve this target include continuing to develop leadership skills and ensuring balanced workloads.</p> <p>At least 90 percent of all our managers (from the Director level with five or more direct employees) will conduct a Leadership Dialog with their employees within two years. The Leadership Dialogs provide managers with structured feedback from their employees. This makes it possible for them to reflect on their own management behavior, recognize their strengths and identify potential improvements. This improves collaboration both with and within the team. The measures for achieving this target include regular monitoring of the completion of Leadership Dialogs and the training of internal or external moderators for the Leadership Dialogs.</p>
	Protection of our employees	<p>Introduce a global training campaign on our seven Golden Rules of Safety, with a different focus in each fiscal year.</p>

Targets for the 2024 fiscal year

 Environmental sustainability and climate protection	Carbon neutrality
	Infineon has set itself the target of becoming carbon-neutral by the end of the 2030 fiscal year in terms of scope 1 and scope 2 emissions as defined by the GHG Protocol. By the end of the 2025 fiscal year, emissions should already have been reduced by 70 percent compared with the 2019 ¹ calendar year.
	Energy management
	Implement projects and measures in the 2024 fiscal year to increase energy efficiency, giving total potential annual energy savings of 20 gigawatt hours. One of the ways this target will be achieved is by adopting site-specific measures for infrastructure and manufacturing.
	Greenhouse gas emissions
	Implement measures that will generate total emission savings ² for greenhouse gases of 50,000 tons of CO ₂ equivalents by the end of the 2024 fiscal year.
	Water management
	Implement projects and measures in the 2024 fiscal year with annual recycling potential of 6 million cubic meters of water. This corresponds to the average annual water consumption of over 114,000 inhabitants in Europe. One of the ways this target will be achieved is by adopting site-specific measures for infrastructure and manufacturing.
	Waste management
	Increase the amount of solvent recovered, with the aim of reusing 800 tons of solvents in manufacturing.

1 In line with our carbon neutrality goal, with the 2019 calendar year as the base year, the relevant data of Cypress are included.
2 Cumulative from the 2021 fiscal year.

Targets for the 2024 fiscal year

	Contribution through sustainable products	Update the calculation of the Infineon carbon footprint; save at least 125 million tons of CO ₂ equivalents with our products during their useful life.
	EU Taxonomy	Implement automated processes for the evaluation and interpretation of information relating to Taxonomy eligibility.
	Our responsibility along the supply chain	<div>Evaluate 100 percent of selected suppliers representing at least 70 percent of the procurement volume with regard to our sustainability requirements.</div> <div>Promote capacity building initiatives for suppliers to raise awareness of how to address specific human rights issues and mitigate the associated risks in their area of operations.</div> <div>Implement a global supplier engagement program to reduce CO₂ emissions in the supply chain (scope 3).</div> <div>Maintain a DRC conflict-free supply chain and conduct another evaluation of the use of conflict minerals for 100 percent of the relevant suppliers.</div> <div>Conduct a due diligence assessment for 100 percent of suppliers of products containing cobalt or mica to create transparency in the supply chain regarding the origin of cobalt and mica and publish the results in the form of a combined cobalt and mica declaration.</div>
	Corporate citizenship	Enhance and update the platform that is used for the reporting and management of the corporate citizenship program, followed by extensive training of the main users on the new functions.

Our contribution to the UN Global Compact principles

UN Global Compact principles	Measures implemented
Human rights	
<p>Principle 1: Businesses should support and respect the protection of internationally proclaimed human rights; and</p> <p>Principle 2: make sure that they are not complicit in human rights abuses.</p>	<ul style="list-style-type: none"> › Our Business Conduct Guidelines define our responsibility towards our customers, employees, suppliers, community and societies as well as to our investors around the world, including respect for and protection of human rights. Our CSR Policy describes our strategic CSR focus areas and our voluntary commitment to fulfill the corresponding obligations. Both our strategic objectives and our daily actions must always be based on high ethical and legal standards. In the 2023 fiscal year, Infineon published a Human Rights Policy. It describes in detail how we make vigorous efforts to protect human rights worldwide in the course of our own business operations and in our dealings with our business partners. The policy complements our Business Conduct Guidelines, our CSR Policy and our Supplier Code of Conduct. › Training for all employees on Business Conduct Guidelines which reflect our commitment to respect international human rights. New employees are automatically enrolled in web-based training or offered classroom-based training. Our employees must participate in regular training to keep their skills up to date. The training must be repeated on a regular basis by our employees. In the 2023 fiscal year, we introduced a further key element, a separate training module on human rights, which is mandatory for all employees worldwide and needs to be repeated every three years. › We conducted various evaluations in the area of human rights at our manufacturing sites around the world. On the basis of these evaluations, we concluded that our activities are in compliance with the International Bill of Human Rights and with the Fundamental ILO Conventions. › We require our suppliers and service providers to comply with the provisions set out in our Supplier Code of Conduct. Infineon obliges its suppliers to protect human rights. A violation would result in consequences for the business relationship with the affected supplier. › In the 2022 fiscal year, a Human Rights Officer with global responsibility as defined by the German Supply Chain Due Diligence Act (German: Lieferkettensorgfaltspflichtengesetz, or LkSG) was assigned.
Labour	
<p>Principle 3: Businesses should uphold the freedom of association and the effective recognition of the right to collective bargaining;</p> <p>Principle 4: the elimination of all forms of forced and compulsory labour;</p> <p>Principle 5: the effective abolition of child labour; and</p> <p>Principle 6: the elimination of discrimination in respect of employment and occupation.</p>	<ul style="list-style-type: none"> › Our Business Conduct Guidelines prohibit discrimination and any form of forced labor. › There are various options available for reporting compliance violations, ranging from a report to the supervisor to a report to the Corporate Compliance Officer or the relevant Regional Compliance Officer. Cases can also be submitted, openly or anonymously, via the Infineon Integrity Line. The compliance department investigates any cases received and decides whether to launch an internal investigation. The Infineon Integrity Line is a whistleblower hotline that provides the reporting party with the opportunity for dialog with a (Regional) Compliance Officer under the highest standards of data protection and without compromising anonymity. Infineon also investigates reports from people outside the company received through our reporting channels. › We react rigorously to demonstrated violations with balanced and suitable measures within the limits of company and legal regulations. Here we follow the principle of proportionality. We therefore decide on an individual case basis which consequences are appropriate, necessary and suitable. › Around 75 percent of our employees work at sites that have entered into collective agreements and where independent employee representatives are in place. › More than 87 percent of our employees work at production sites where committees are in place that also offer employers, employees and/or independent employee representatives the opportunity to discuss and receive advice on topics relating to environmental protection, occupational safety and health. › We uphold and promote the fundamental principles defined in the conventions of the International Labour Organization, such as protection from discrimination in the selection, hiring, employment and promotion of employees, and the right to form workers' councils, as well as the rejection of child labor and all forms of forced labor. Persons under the age of 15 are not allowed to work at Infineon. Exceptions apply for countries subject to ILO Convention 138 (minimum age reduced to 14 years) or for job training or training programs that are authorized by the relevant government and demonstrably promote those participating.

UN Global Compact principles	Measures implemented
Environment	
<p>Principle 7: Businesses should support a precautionary approach to environmental challenges;</p> <p>Principle 8: undertake initiatives to promote greater environmental responsibility; and</p> <p>Principle 9: encourage the development and diffusion of environmentally friendly technologies.</p>	<ul style="list-style-type: none"> › Our IMPRES (Infineon Integrated Management Program for Environment, Energy, Safety and Health) is globally certified in accordance with ISO 14001 and ISO 45001. Our major European manufacturing sites and our corporate headquarters Campeon (Germany) are also certified in accordance with ISO 50001. › Our IMPRES policy is an essential part of our management system, which contains binding internal strategies, processes, goals and requirements in the areas of environmental protection, energy, occupational safety and health. › The responsible member of the Management Board defines the framework for the objectives in this area within the Infineon Group. As part of these definitions, the management responsible sets appropriate targets at site level and ensures the achievement of the targets. Infineon has set itself the target of becoming carbon-neutral by the end of the 2030 fiscal year in terms of scope 1 and scope 2 emissions. By the end of the 2025 fiscal year, it should have already reduced CO₂ emissions by 70 percent compared with the 2019¹ calendar year. › Internal environmental, energy, occupational safety and health audits and external certification audits take place at the sites in the context of our multi-site certification.
Anti-Corruption	
<p>Principle 10: Businesses should work against corruption in all its forms, including extortion and bribery.</p>	<ul style="list-style-type: none"> › In order to further increase awareness of the topic of preventing corruption in the company, this topic is included in the web-based Business Conduct Guidelines training. In addition, specific web-based training on the prevention of corruption is continuously and automatically rolled out for particular target groups. All new employees belonging to these target groups are automatically signed up for mandatory web-based training sessions. We also conduct business partner checks to ensure that we work together with law-abiding business partners with integrity. › The rules that apply to the reporting of compliance violations are set out in our Business Conduct Guidelines and in the Guideline on Reporting and Handling Potential Compliance Violations.

¹ In line with our carbon neutrality goal, with the 2019 calendar year as the base year, the relevant data of Cypress are included.

Sustainable Development Goals

The United Nations Agenda 2030 for Sustainable Development is an expression of the conviction of the international community of states that the global challenges we face can only be mastered together. The Agenda creates a foundation for shaping worldwide economic progress in harmony with social justice and within the ecological boundaries of the Earth. The heart of the Agenda is an ambitious catalog with 17 Sustainable Development Goals. Infineon reports below on which measures have been or will be implemented for relevant goals and where our business model can contribute to realizing the goals of the Agenda 2030.

Goal	Description	Implementation at Infineon
	Ensure healthy lives and promote well-being for all at all ages	Training and continuing education in the area of environmental protection, occupational safety and health are available to employees, including specialized experts. In the 2023 fiscal year, our worldwide specialized experts in the areas of occupational safety and health, as well as in fire prevention, invested around 51,367 hours in training and continuing education measures. Infineon also offers projects in the area of ergonomics and health measures. In addition, all employees have the opportunity to report work-related accidents directly to their managers, the medical department or via our accident reporting tool to ensure the best and most rapid treatment possible.
	Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all	We are committed to high-quality education as a part of the focus area “Education for Future Generations” of our corporate citizenship program. 69 percent of Infineon’s donations and sponsoring activities relate to this area.
	Achieve gender equality and empower all women and girls	No one should be personally attacked, discriminated against, harassed or excluded because of their gender, age, ethnic origin or nationality, physical or mental ability, religion or ideology, or sexual orientation and identity. Our Business Conduct Guidelines reflect this. We take decisive action against every form of discrimination, sexual harassment, physical violence, coercion or verbal abuse. Employment of women and equal opportunity for women in taking on management roles is an integral part of Infineon’s Diversity & Inclusion policy and programs.

Goal	Description	Implementation at Infineon
	Ensure availability and sustainable management of water and sanitation for all	We ensure that our employees have access to drinking water, sanitary facilities and hygiene at our sites. In addition, as part of our social and environmental commitment, we provided financial support for the organizations Aktion Deutschland Hilft e.V. and Center for Disaster Philanthropy. Aktion Deutschland Hilft e. V. provides emergency aid for people affected by a major earthquake in Turkey and Syria, in the form of emergency shelters, food and drinking water. The Center for Disaster Philanthropy supports individuals and families, for example from Ukraine, by providing, among other things, water, sanitary facilities and toiletries.
	Ensure access to affordable, reliable, sustainable and modern energy for all	Semiconductors from Infineon enable more efficient generation of electricity from renewable sources. Furthermore, they offer increased efficiency at all stages of the value chain in the energy industry: in generation, transmission, storage and, in particular, in the use of electric energy. They form the basis for the intelligent and efficient use of electric energy, for example, in industrial applications, power supplies for computers and consumer electronics as well as in electric vehicles.
	Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all	We respect and promote the fundamental principles set out in the International Labour Organization conventions in our daily actions. Infineon supports special activities that promote decent work opportunities for everyone. In the 2023 fiscal year, we continued to provide the best possible working environment for all our employees around the world. This includes making available the working materials required, such as IT equipment for digital collaboration, and the opportunity for mobile working wherever possible.
	Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation	Our environmental management system enables more efficient use of resources and the use of clean and environmentally friendly technologies and industrial processes. Infineon has defined specific processes for taking environmental aspects into account in the purchasing of manufacturing equipment and services.
	Make cities and human settlements inclusive, safe, resilient and sustainable	Population growth and increasing urbanization require sustainable solutions for applications in all areas of daily life, from buildings and homes to factories and cities. With its sensors, controllers, power semiconductors and security solutions, Infineon enables intelligent, secure and energy-efficient IoT solutions for smart homes and buildings, smart cities, smart fitness and lifestyle applications, Industry 4.0 and connected smart vehicles. Our components not only contribute to sustainable and efficient mobility but also enable secure contactless payment systems, control systems and robotic solutions that work quickly and reliably.

Goal	Description	Implementation at Infineon
	Ensure sustainable consumption and production patterns	The availability of natural resources is one of the largest global challenges. Efficient resources management is therefore a central part of IMPRES. The manufacture of semiconductors requires the use of chemicals, which we handle with a great sense of responsibility. As part of IMPRES, we commit to our responsibility in the supply chain by concentrating on the procurement of environmentally friendly materials for the manufacture of our products.
	Take urgent action to combat climate change and its impacts	We recognize the urgent global challenge of reducing greenhouse gas emissions. We contribute to this effort with innovative products and solutions that help reduce emissions during their entire use-phase. Ensuring resource efficiency in manufacturing is also an essential pillar of our sustainability strategy. Infineon has set itself the target of becoming carbon-neutral by the end of the 2030 fiscal year in terms of scope 1 and scope 2 emissions. By the end of the 2025 fiscal year, emissions will be reduced by 70 percent compared with the 2019 ¹ calendar year. In addition, Infineon provides a transparent overview of greenhouse gas emissions as part of its annual reporting.
	Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss	In the context of the focus area Environmental Sustainability of our corporate citizenship program, we engage in special projects aimed at protecting ecosystems. An example of this was our financial support for the planting of trees in Warstein (Germany) to counter the massive forest dieback caused by bark beetles. Soil protection and biodiversity are generally a permanent part of IMPRES. Our aim is to prevent injury to persons and damage to property, protect biodiversity and nature, and avoid environmental impacts and damage to nature and forests, as well as minimize any potential influence on climate change.
	Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels	We promote a peaceful and equal society by complying with international standards and principles, such as the International Bill of Human Rights and the principles of the UN Global Compact. We do not tolerate child labor and, with the Infineon Technologies Slavery and Human Trafficking Statement, we underline, for example, our complete rejection of any form of human trafficking or slavery. Our Business Conduct Guidelines set out a code of conduct that forms the essential foundation of our daily actions when dealing with one another and with our customers, investors, business partners and the general public. Infineon's Human Rights Policy describes in detail how Infineon addresses respect for human rights in its business operations and with its business partners worldwide. Our stakeholders also have opportunities, both internal and external, such as the anonymous Infineon Integrity Line, to report actual and suspected violations.

¹ In line with our carbon neutrality goal, with the 2019 calendar year as the base year, the relevant data of Cypress are included.

GRI 3: Material Topics 2021				
3-1	Process to determine material topics	9 – 13		The reporting of the 2023 fiscal year has not significantly changed compared to the previous fiscal year.
3-2	List of material topics	10, GRI Content Index		
3-3	Management of material topics	9 – 13, 14 – 50, 61	65 – 71	
GRI 200: Economic Topics				
Economic performance				
GRI 201: Economic Performance 2016				
201-1	Direct economic value generated and distributed	50, GRI Content Index	2, 89 – 94	Retained economic value is not reported. Splitting direct economic value generated and distributed (EVG&D) by region or market is not relevant.
201-2	Financial implications and other risks and opportunities due to climate change	11 – 12		
201-3	Defined benefit plan obligations and other retirement plans		103, 125 – 129	Splitting of “received benefits” by country is not relevant. Governments do not participate in Infineon.
201-4	Financial assistance received from government	GRI Content Index	105, 109 – 110	
Indirect economic impacts				
GRI 203: Indirect Economic Impacts 2016				
203-1	Infrastructure investments and services supported	50 – 51		Through the use of products in which our semiconductors are used, Infineon has indirect economic impacts, for example, in efficiency improvements. The significance of those impacts was – due to external parameters – not determined in each individual case.
203-2	Significant indirect economic impacts	GRI Content Index	21 – 32	
Anti-corruption				
GRI 205: Anti-corruption 2016				
205-2	Communication and training about anti-corruption policies and procedures	14 – 15, 61, GRI Content Index		Compliance training is also carried out at management level and Board level. Splitting training participation by individual region or employee category is not a global control parameter for Infineon.
Anti-competitive Behavior				
GRI 206: Anti-competitive Behavior 2016				
206-1	Legal actions for anti-competitive behavior, anti-trust, and monopoly practices		136 – 139

207-1 Approach to tax	15		The Tax Compliance and Governance Report can be downloaded from our website: www.infineon.com/tax_report
207-2 Tax governance, control, and risk management	15		The Tax Compliance and Governance Report can be downloaded from our website: www.infineon.com/tax_report
207-3 Stakeholder engagement and management of concerns related to tax	15		The Tax Compliance and Governance Report can be downloaded from our website: www.infineon.com/tax_report
207-4 Country-by-country reporting	GRI Content Index		In the countries in which it operates, Infineon pays all taxes in compliance with the tax laws applicable in the relevant jurisdiction. Further information and legally required disclosures on the subject of tax are provided in the Annual Report, so it is not necessary to disclose country-specific information here. www.infineon.com/annualreport

GRI 300: Environmental Topics

Energy

GRI 302: Energy 2016

302-1 Energy consumption within the organization	29 – 30		
302-2 Energy consumption outside of the organization	29 – 30, 32, GRI Content Index		The description of scope 3 emissions is based on the Infineon carbon footprint, which includes the entire energy consumption of Infineon, and is reported in metric tons of CO ₂ equivalents. The other steps, that is, the use-phase of the products by the customer as well as their disposal, cannot be automatically calculated due to the different potential applications and fields of use of Infineon products.
302-3 Energy intensity	29 – 30, 32, GRI Content Index		Due to the confidentiality of specific information, Infineon reported the specific energy consumption in kilowatt hours per euro.
302-4 Reduction of energy consumption	54		
302-5 Reductions in energy requirements of products and services	37 – 39		

Water and effluents

GRI 303: Water and Effluents 2018

303-1 Interactions with water as a shared resource	33 – 35, GRI Content Index		Besides the water balance, information regarding water stress on the two sites is also provided. None of our suppliers has reported water-related risks.
303-2 Management of water discharge-related impacts	33 – 35		
303-3 Water withdrawal	33 – 35, GRI Content Index		Since no salty seawater is used, the water utilized is considered as fresh water. The data is reported in percent.
303-4 Water discharge	33 – 35		
303-5 Water consumption	32 – 35, GRI Content Index		We report water withdrawal in reference to 303-3. Water discharge includes water from production, evaporation and municipal waste water. The data for water from production is available to us. However, the data for evaporation and municipal waste water is not available, thus the determination of water consumption cannot taken these data into account. Water storage is not relevant for us.

Employment				
GRI 401: Employment 2016				
401-1	New employee hires and employee turnover	25		
401-2	Benefits provided to full-time employees that are not provided to temporary or part-time employees	23		
Occupational health and safety				
GRI 403: Occupational Health and Safety 2018				
403-1	Occupational health and safety management system	13, 26		
403-2	Hazard identification, risk assessment, and incident investigation	26 – 27, GRI Content Index		Accidents can be reported at any time via clearly defined processes. Accident analysis and any necessary changes in the risk assessment are carried out by the required experts and, if necessary, the employee representatives together with the employee.
403-3	Occupational health services	20 – 21, 26 – 27		

	Topic	Page Report Sustainability at Infineon 2023	Page Annual Report 2023	Remarks
403-4	Worker participation, consultation, and communication on occupational health and safety	60		
403-5	Worker training on occupational health and safety	26		
403-6	Promotion of worker health	20–21		
403-7	Prevention and mitigation of occupational health and safety impacts directly linked by business relationships	26–28, 47		
403-8	Workers covered by an occupational health and safety management system	26, 28, GRI Content Index		More than 87 percent of Infineon employees worldwide work at sites that are certified as part of our IMPRES Management System.
403-9	Work-related injuries	26–27, GRI Content Index		In addition to the general accident data, in the 2023 fiscal year we have sorted the information by gender. The female employees had an Injury Rate (IR) of 0.39 and a Lost Day Rate (LDR) of 5.83 and the male employees had an IR of 0.34 and an LDR of 5.24. In the 2023 fiscal year, Infineon received no notifications worldwide of employees who described their gender as “diverse”. Reporting of the accident rate and lost days rate by region is not a global control parameter. Infineon has currently no globally harmonized information for the reporting of occupational diseases. The absenteeism rate is not a global control parameter.
Training and education				
GRI 404: Training and Education 2016				
404-1	Average hours of training per year per employee	22–23		
Diversity and equal opportunity				
GRI 405: Diversity and Equal Opportunity 2016				
405-1	Diversity of governance bodies and employees	16, 21–22		
405-2	Ratio of basic salary and remuneration of women to men	24, GRI Content Index		Gender differences have no impact on remuneration. Each employee receives appropriate, transparent remuneration for their work, in compliance with all legal standards.
Non-discrimination				
GRI 406: Non-discrimination 2016				
406-1	Incidents of discrimination and corrective actions taken	14–15		
Forced or compulsory labor				
GRI 409: Forced or Compulsory Labor 2016				
409-1	Operations and suppliers at significant risk for incidents of forced or compulsory labor	47–49		
Local communities				
GRI 413: Local Communities 2016				
413-1	Operations with local community engagement, impact assessments and development programs	8, 50–51		
413-2	Operations with significant actual and potential negative impacts on local communities	GRI Content Index		During the 2023 fiscal year, our worldwide corporate citizenship representatives did not find any adverse effects.

Topic		Page Report Sustainability at Infineon 2023	Page Annual Report 2023	Remarks
Supplier social assessment				
GRI 414: Supplier Social Assessment 2016

416-1	Assessment of the health and safety impacts of product and service categories	39		
416-2	Incidents of non-compliance concerning the health and safety impacts of products and services	GRI Content Index		During the 2023 fiscal year, Infineon did not identify any incidents of non-compliance with regulations and voluntary codes related to the impacts of products and services on health and safety.
Marketing and labeling				
GRI 417: Marketing and Labeling 2016				
417-1	Requirements for product and service information and labeling	39		
Customer Privacy				
GRI 418: Customer Privacy 2016				
418-1	Substantiated complaints concerning breaches of customer privacy and losses of customer data	16, GRI Content Index		Infineon has not received any substantiated complaints concerning breaches of customer privacy, nor has it identified any leak, theft or loss of customer data.

Assurance Reports

Assurance Report of the Independent Auditor regarding Sustainability Information¹

To the Management Board of Infineon Technologies AG, Neubiberg

We have performed an independent limited assurance engagement on the sustainability information published in “Sustainability at Infineon – Supplementing the Annual Report 2022” (further: “Report”) including the “Explanatory Notes” of Infineon Technologies AG (further: “Infineon”) for the fiscal year from October 1, 2022 to September 30, 2023, published in the Report as well as at www.infineon.com/csr_reporting.

For the following non-financial disclosures, we performed a reasonable assurance engagement:

- › Proportion of women in management positions
- › Technical PFC reduction and energy efficiency measures
- › CO₂ emissions (Scope 1 and 2) for fiscal year 2022/2023

The selected non-financial disclosures are referred to below as “Proportion of women in management positions” and “CO₂ emissions and reduction”.

Management’s Responsibility

The legal representatives of Infineon are responsible for the preparation of the report with reference to the principles and standard disclosures of the GRI Sustainability Reporting Standards of the Global Reporting Initiative, in combination with internal guidelines as well as internally developed criteria for the reporting and calculation of the indicator “CO₂ savings enabled through our products” (further: Reporting Criteria).

This responsibility of the legal representatives includes the selection and application of appropriate methods to prepare the assured information and the use of assumptions and estimates for individual sustainability disclosures which are reasonable under the given circumstances. Furthermore, the responsibility includes designing, implementing and maintaining systems and processes relevant for the preparation of the information in a way that is free of – intended or unintended – material misstatements.

Practitioner’s Responsibility

Our responsibility is to express a conclusion with limited assurance on the sustainability information in the Report including the “Explanatory Notes” and with reasonable assurance on the selected non-financial disclosures “Proportion of women in management positions” and “CO₂ emissions and reduction” based on our work performed.

We conducted our work on the sustainability information in the Report including the “Explanatory Notes” in accordance with the International Standard on Assurance Engagements (ISAE) 3000 (Revised): “Assurance Engagements other than Audits or Reviews of Historical Financial Information” published by the International Auditing and Assurance Standards Board (IAASB) as a limited assurance engagement. This Standard requires that we plan and perform the assurance engagement to obtain limited assurance whether any matters have come to our attention that cause us to believe that the sustainability information in the Report including the “Explanatory Notes”, published online at www.infineon.com/csr_reporting for the period from October 1, 2022 to September 30, 2023, has not been prepared, in all material respects, with the aforementioned Reporting Criteria. We do not, however, issue a separate conclusion for each sustainability disclosure. In a limited assurance engagement, the evidence gathering procedures are more limited than in a reasonable assurance engagement and therefore less assurance is obtained than in a reasonable assurance engagement. The choice of audit procedures is subject to the auditor’s own judgement.

¹ Our engagement applied to the German version of the Report. This text is a translation of the Independent Assurance Report issued in German, whereas the German text is authoritative.

Within the scope of our limited assurance engagement, we performed amongst others the following procedures:

- › Interviewing employees at Group level in order to gain an understanding of the process for determining material sustainability topics and the respective boundaries of Infineon
- › A risk analysis, including a media research, to identify relevant sustainability aspects for Infineon in the reporting period
- › Reviewing the suitability of internally developed Reporting Criteria
- › Evaluation of the design and implementation of the systems and processes for determining, processing and monitoring of sustainability disclosures included in the scope of this engagement, including the consolidation of the data
- › Inquiries of personnel at Group level responsible for determining disclosures on concepts, due-diligence processes, results and risks, for conducting internal controls and consolidation of the disclosures
- › Evaluation of selected internal and external documentation
- › An analytical review of the data and trend explanations of quantitative information submitted by all sites for consolidation at Group level
- › Evaluation of local data collection, validation and reporting processes as well as the reliability of reported data based on samples at Dresden (Germany) and Melaka (Malaysia)
- › Assessment of the overall presentation of the disclosures

For the selected non-financial disclosures “Proportion of women in management positions” and “CO₂ emissions and reduction”, we conducted our work in the form of a reasonable assurance engagement in accordance with the International Standard on Assurance Engagements (ISAE) 3000 (Revised). Accordingly, we have to comply with our professional duties and to plan and perform the assurance engagement in such a way that we, respecting the principle of materiality, reach our conclusion with a reasonable level of assurance. The choice of assurance procedures is subject to the auditor’s own judgement.

Within the scope of our reasonable assurance engagement we performed, amongst others, the following procedures:

- › A risk analysis, including a media research of relevant information about Infineon’s sustainability performance in the reporting period with respect to the selected non-financial disclosures “Proportion of women in management positions” and “CO₂ emissions and reduction”
- › Evaluation of the design and implementation of systems and processes for identifying, processing and monitoring disclosures, including the consolidation of data for the selected non-financial disclosures “Proportion of women in management positions” and “CO₂ emissions and reduction”
- › Performing control-based assurance procedures to assess the design and effectiveness of internal controls for determining, processing and monitoring of disclosures, including the consolidation of data at the Group level for the selected non-financial disclosures “CO₂ emissions and reduction”
- › Performing substantive assurance procedures, in particular reviewing internal and external documentation for the selected non-financial disclosures “Proportion of women in management positions” and “CO₂ emissions and reduction”

- › Analytical evaluation of data and trends of quantitative disclosures for the selected non-financial disclosures “Proportion of women in management positions” and “CO₂ emissions and reduction” which are reported by all sites to Group level for consolidation
- › Evaluation of local data collection, validation and reporting processes as well as the reliability of reported data for the selected non-financial disclosures “Proportion of women in management positions” and “CO₂ emissions and reduction” at the sites in Regensburg and Dresden (Germany), Villach (Austria), Kulim and Melaka (Malaysia), as well as Austin (Texas, USA)

In our opinion, we obtained sufficient and appropriate evidence for reaching a conclusion for the assurance engagement.

Assurance of the auditor's independence and quality

In performing our engagement, we have complied with the independence and quality assurance requirements of national laws and professional standards, in particular the Professional Code of Ethics for Public Accountants and Certified Public Accountants and the IDW Quality Assurance Standard: Requirements for Quality Assurance in Auditing Practice (IDW QS 1).

Conclusion

Based on the procedures performed and the evidence received to obtain assurance, nothing has come to our attention that causes us to believe that the sustainability information in “Sustainability at Infineon – Supplementing the Annual Report 2022” including the “Explanatory Notes” published online at www.infineon.com/csr_reporting, for the fiscal year from October 1, 2022 to September 30, 2023, is not prepared, in all material respects, in accordance with the Reporting Criteria.

In our opinion, the selected non-financial disclosures “Proportion of women in management positions” and “CO₂ emissions and reduction” of Infineon Report for the period from October 1, 2022 to September 30, 2023 have been prepared, in all material respects, in accordance with the Reporting Criteria.

Restriction of Use/Clause on General Engagement Terms

This assurance report is issued for the purposes of the Management Board of Infineon, Neubiberg only. We assume no responsibility with regard to any third parties.

Our assignment for the Management Board of Infineon, Neubiberg and professional liability is governed by the General Engagement Terms for Wirtschaftsprüfer and Wirtschaftsprüfungsgesellschaften (German Public Auditors and German Public Audit Firms) (Allgemeine Auftragsbedingungen für Wirtschaftsprüfer und Wirtschaftsprüfungsgesellschaften) in the version dated January 1, 2017 (www.kpmg.de/bescheinigungen/lib/aab_english.pdf). By reading and using the information contained in this assurance report, each recipient confirms having taken note of provisions of the General Engagement Terms (including the limitation of our liability for negligence to EUR 4 million as stipulated in No. 9) and accepts the validity of the attached General Engagement Terms with respect to us.

Assurance Reports

Assurance Report of the Independent Auditor regarding the Combined Separate Non-Financial Report¹

To the Supervisory Board of Infineon Technologies AG, Neubiberg

We have performed an independent limited assurance engagement on the Combined Separate Non-Financial Report (further: “Report“) of Infineon Technologies AG and the Group (further: “Infineon“) as well as the sections “Group strategy”, “Report on outlook, risk and opportunity”, “Business model”, “Research and development” and “Corporate Governance” of the Combined Management Report, which have been qualified as part of the Report by reference, according to Sections 315b and 315c in conjunction with 289b to 289e HGB (German Commercial Code) for the fiscal year from October 1, 2022 to September 30, 2023.

For the following non-financial disclosures, we performed a reasonable assurance engagement:

- › Proportion of women in management positions
- › Technical PFC reduction and energy efficiency measures
- › CO₂ emissions (Scope 1 and 2) for fiscal year 2022/2023

The selected non-financial disclosures are referred to below as “Proportion of women in management positions” and “CO₂ emissions and reduction”.

Management’s Responsibility

The legal representatives of Infineon are responsible for the preparation of the Report in accordance with Sections 315b and 315c in conjunction with 289b to 289e HGB and with Article 8 of REGULATION (EU) 2020/852 OF THE EUROPEAN PARLIAMENT AND OF THE COUNCIL of June 18, 2020 on the establishment of a framework to facilitate sustainable investment, and amending Regulation (EU) 2019/2088 (further „EU Taxonomy Regulation“) and the supplementing Delegated Acts as well as the interpretation of the wordings and terms contained in the EU Taxonomy Regulation and in the supplementing Delegated Acts by the Company as disclosed in Section “EU Taxonomy” of the combined separate non-financial report.

¹ Our engagement applied to the German version of the Report. This text is a translation of the Independent Assurance Report issued in the German language, whereas the German text is authoritative.

This responsibility of the legal representatives includes the selection and application of appropriate methods to prepare the Report and the use of assumptions and estimates for individual disclosures which are reasonable under the given circumstances. Furthermore, this responsibility includes designing, implementing and maintaining systems and processes relevant for the preparation of the Report in a way that is free of – intended or unintended – material misstatements.

The EU Taxonomy Regulation and the supplementing Delegated Acts contain wordings and terms that are still subject to substantial uncertainties regarding their interpretation and for which not all clarifications have been published yet. Therefore, the legal representatives have included a description of their interpretation in Section “EU Taxonomy” of the combined separate non-financial report. They are responsible for its tenability. Due to the innate risk of diverging interpretations of vague legal concepts, the legal conformity of these interpretations is subject to uncertainty.

Practitioner’s Responsibility

Our responsibility is to express a conclusion with limited assurance on the Report, including the selected qualifying sections in the Combined Management Report, and with reasonable assurance on the selected non-financial disclosures “Proportion of women in management positions” and “CO₂ emissions and reduction” based on our work performed.

We conducted our work on the Report, including the selected qualifying sections in the Combined Management Report, in accordance with the International Standard on Assurance Engagements (ISAE) 3000 (Revised): “Assurance Engagements other than Audits or Reviews of Historical Financial Information”, published by the International Auditing and Assurance Standards Board (IAASB), as a limited assurance engagement. This standard requires that we plan and perform the assurance engagement to obtain limited assurance whether any matters have come to our attention that cause us to believe that the Report, including the selected qualifying sections in the Combined Management Report, for the period from October 1, 2022 to September 30, 2023 has not been prepared, in all material respects, in accordance with Sections 315b and 315c in conjunction with 289b to 289e HGB and with the EU Taxonomy Regulation and the supplementing Delegated Acts as well as the interpretation of the wordings and terms contained in the EU Taxonomy Regulation and in the supplementing

Delegated Acts by the legal representatives as disclosed in Section “EU Taxonomy” of the combined separate non-financial report. We do not, however, provide a separate conclusion for each disclosure. In a limited assurance engagement, the evidence gathering procedures are more limited than in a reasonable assurance engagement and therefore less assurance is obtained than in a reasonable assurance engagement. The choice of audit procedures is subject to the auditor’s own judgement.

Within the scope of our engagement, we performed amongst others the following procedures:

- › Interviewing employees at Group level in order to gain an understanding of the approach to identifying material issues and corresponding reporting boundaries of Infineon
- › A risk analysis, including a media research, to identify relevant sustainability aspects for Infineon in the reporting period
- › Reviewing the suitability of internally developed Reporting Criteria
- › Evaluation of the design and implementation of the systems and processes for determining, processing and monitoring of disclosures relating to environmental, employee and social matters, respect for human rights and combating corruption and bribery, including the consolidation of the data
- › Inquiries of personnel at Group level responsible for determining disclosures on concepts, due-diligence processes, results and risks, for conducting internal controls and consolidation of the disclosures
- › Evaluation of selected internal and external documentation
- › An analytical review of the data and trend explanations of quantitative information submitted by all sites for consolidation at Group level
- › Evaluation of local data collection, validation and reporting processes as well as the reliability of reported data based on samples at Dresden (Germany) and Melaka (Malaysia)
- › Reconciliation of disclosures in the combined separate non-financial report with the corresponding disclosures in the consolidated financial statements and the Combined Management Report

- › Assessment of the overall presentation of the disclosures
- › Inquiries of Group level personnel in order to understand the processes for identifying relevant economic activities according to the EU Taxonomy Regulation
- › Understanding the design and implementation of systems and processes for the identification, processing and monitoring of turnover, capital expenditure and operating expenditure disclosures for taxonomy-eligible and taxonomy-aligned economic activities
- › Evaluation of the process for the identification of taxonomy-eligible and taxonomy-aligned economic activities and the corresponding disclosures in the combined separate non-financial report

The legal representatives have to interpret vague legal concepts in order to be able to compile the relevant disclosures according to Article 8 of the EU Taxonomy Regulation. Due to the innate risk of diverging interpretations of vague legal concepts, the legal conformity of these interpretations and, correspondingly, our assurance thereof are subject to uncertainty.

For the selected non-financial disclosures “Proportion of women in management positions” and “CO₂ emissions and reduction”, we conducted our work in the form of a reasonable assurance engagement in accordance with the International Standard on Assurance Engagements (ISAE) 3000 (Revised). Accordingly, we have to comply with our professional duties and to plan and perform the assurance engagement in such a way that we, respecting the principle of materiality, reach our conclusion with a reasonable level of assurance. The choice of assurance procedures is subject to the auditor’s own judgement. Within the scope of our reasonable assurance engagement we performed, amongst others, the following procedures:

- › A risk analysis, including a media research of relevant information about Infineon’s sustainability performance in the reporting period with respect to the selected non-financial disclosures “Proportion of women in management positions” and “CO₂ emissions and reduction”

- › Evaluation of the design and implementation of systems and processes for identifying, processing and monitoring disclosures, including the consolidation of data for the selected non-financial disclosures “Proportion of women in management positions” and “CO₂ emissions and reduction”
- › Performing control-based assurance procedures to assess the design and effectiveness of internal controls for determining, processing and monitoring of disclosures, including the consolidation of data at the Group level for the selected non-financial disclosures “CO₂ emissions and reduction”
- › Performing substantive assurance procedures, in particular reviewing internal and external documentation for the selected non-financial disclosures “Proportion of women in management positions” and “CO₂ emissions and reduction”
- › Analytical evaluation of data and trends of quantitative disclosures for the selected non-financial disclosures “Proportion of women in management positions” and “CO₂ emissions and reduction” which are reported by all sites to Group level for consolidation
- › Evaluation of local data collection, validation and reporting processes as well as the reliability of reported data for the selected non-financial disclosures “Proportion of women in management positions” and “CO₂ emissions and reduction” at the sites in Regensburg and Dresden (Germany), Villach (Austria), Kulim and Melaka (Malaysia), as well as Austin (Texas, USA)

In our opinion, we obtained sufficient and appropriate evidence for reaching a conclusion for the assurance engagement.

Assurance of the auditor’s independence and quality

In performing our engagement, we have complied with the independence and quality assurance requirements of national laws and professional standards, in particular the Professional Code of Ethics for Public Accountants and Certified Public Accountants and the IDW Quality Assurance Standard: Requirements for Quality Assurance in Auditing Practice (IDW QS 1).

Conclusion

Based on the procedures performed and the evidence obtained, nothing has come to our attention that causes us to believe that the Report of Infineon including the selected qualifying sections in the Combined Management Report, for the fiscal year from October 1, 2022 to September 30, 2023, is not prepared, in all material respects,

in accordance with Sections 315b and 315c in conjunction with 289b to 289e HGB and with the EU Taxonomy Regulation and the supplementing Delegated Acts as well as the interpretation disclosed in Section “EU Taxonomy” of the combined separate non-financial report.

In our opinion, the selected non-financial disclosures “Proportion of women in management positions” and “CO₂ emissions and reduction” of Infineon for the period from October 1, 2022 to September 30, 2023 have been prepared, in all material respects, in accordance with Sections 315b and 315c in conjunction with 289c to 289e HGB.

Restriction of Use/Clause on General Engagement Terms

This assurance report is issued for the purposes of the Supervisory Board of Infineon, Neubiberg, only. We assume no responsibility with regard to any third parties.

Our assignment for the Supervisory Board of Infineon, Neubiberg, and professional liability is governed by the General Engagement Terms for Wirtschaftsprüfer and Wirtschaftsprüfungsgesellschaften (German Public Auditors and German Public Audit Firms) (Allgemeine Auftragsbedingungen für Wirtschaftsprüfer und Wirtschaftsprüfungsgesellschaften) in the version dated January 1, 2017 (www.kpmg.de/bescheinigungen/lib/aab_english.pdf).
